

5 Port Solenoid Valve Rubber Seal *Series SX*

Pilot valves are concentrated on one-side, realizing wiring into a bundle and unencumbered appearance, too.

Low power consumption: 0.6 W
(Current draw: 25 mA at 24 VDC)

Compact design with large flow

Body width [mm]	Sonic conductance: C [dm ³ /(s·bar)]
10	1.1
15	2.8
18	4.5

Response time 10 ms (Representative value)
(SX3000 double, 0.5 MPa, 20°C)

High reliability and long service life exceeding 50 million cycles or more

(The valve may differ from a life under actual operating conditions. It is derived from our life test data.)

Improved drainage resistance

Suitable for copper-free applications

Bright color tone and state of the art design

No exhaust mist, no exhaust noise of pilot valve

<Common exhaust type for main and pilot valve>

The fittings of the cylinder ports can be changed simply for the modification of the port size or for replacement.

⚠ Precautions

Be sure to read before handling. For Safety Instructions and Solenoid Valve Precautions, refer to page 1-7-2.

Manual Override Operation

⚠ Warning

■ Non-locking push type

■ Push-turn locking slotted type (Type D)

After pushing down, turn in the direction of the arrow. If you do not turn, the mechanism is the same as that of a non-locking push type.

⚠ Caution

When locking the manual override on the push-turn locking slotted type, be sure to push it down before turning. Turning without first pushing it down can cause damage to the manual override and other trouble such as air leakage, etc.

⚠ Caution

When operating the lock with the driver, use a watchmakers' screwdriver and turn lightly. [Torque: 0.1 N·m or less]

Exhaust Restriction

⚠ Caution

Since Series SX has a mechanism that the exhausted air from pilot valve is gathered with the exhaust of the main valve inside, make sure that the exhaust port is not restricted.

Usage of SX3000/5000/7000 as a 3 Way Valve

⚠ Caution

In the case of using a 5 port valve

Series SX3000, 5000, 7000 may be used as and N.C. or N.O. 3 way valve by plugging one of the A, B ports. Be sure not to plug the exhaust ports. Can be used when a double solenoid, 3 way valve is required.

Plug position		B port	A port
Actuation		N.C.	N.O.
Number of solenoids	Single		
	Double		

How to Use Plug Connector

⚠ Caution

1. Attaching and detaching connectors

- To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.
- To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

2. Crimping the lead wire and socket

- Peel 3.2 to 3.7 mm of the tip of lead wire, enter the core wires neatly into a socket and crimp it with a special crimp tool. Be careful so that the cover of lead wire does not enter into the crimping part.

(Crimping tool: Model no. DXT170-75-1)

3. Attaching and detaching lead wires with sockets

● Attaching

Insert the sockets into the square holes of the connector (with + and - indication) and, continue to push the sockets all the way in until the lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then confirm that they are locked by pulling lightly on the lead wires.

● Detaching

To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm).

If the socket is used again, spread the hook outward.

■ Plug connector lead wire lengths

Standard length is 300 mm, but the following lengths are also available.

How to Order

When ordering a common connector lead wire assembly, indicate the model no. for manifold, solenoid valve and common connector assembly. For more complicated assemblies, refer to the manifold specification sheet.

Note1) Applications like connectors not wired to a valve or when there is a blank station between valves is not possible.

Note2) Designate "Without connector" of plug connector style for solenoid valve. Grommet style is not applicable.

Note3) Connector assembly with lead wire for place where the signals are transmitted to the common wiring. (Only the valves of first station and/or last station of manifold are compatible to connector with lead wire for common.)

- SS5X3-41-04-C6 1 set
 * SX3140-5MO 2 set
 * SX3240-5MO 2 set
 * SX100-40-4S 1 set (Single solenoid with lead wire for common)
 * SX100-42-4S 1 set (Single solenoid)
 * SX100-42-4D 2 set (Double solenoid, 3 position)

→ The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

Common Connector Assembly Wiring

When only common connector assembly is ordered, wiring should be done as shown in How to Order Common Connector Assembly the illustration to the right. Refer to "How to Use Plug Connector" on page 1-6-8 for further information on socket mounting.

 For double solenoid, 3 position type: SX3000-24-2A

⚠ Caution

One-touch Fittings

The pitch of each piping port (P, A, B, etc.) for Series SX is based on the assumption that Series KJ One-touch fittings will be used. For this reason, when other fittings are used, they may interfere with one another depending on their types and sizes. Therefore, the dimensions of the fittings to be used should first be confirmed in their respective catalogs.

⚠ Precautions

Be sure to read before handling. For Safety Instructions and Solenoid Valve Precautions, refer to page 1-7-2.

Surge voltage suppressor

Connect so that polarity is matched to the connector's (+), (-) and A, B and COM indicators. In the case of voltage specifications other than 12 or 24 VDC, take care to avoid mistaking polarity, as there is no diode to prevent reverse current.

In the event that lead wires are connected in advance, they will be as shown below.

Pos. common specifications A (-): Black
COM (+): Red
B (-): White (Without lead wire in case of single solenoid)

Neg. common specifications A (+): Black
COM (-): Yellow

Light Indication

⚠ Caution

When equipped with indicator light and surge voltage suppressor, the light window turns orange when solenoid A is energized, and it turns green when solenoid B is energized.

Fixed DIN Rail Manifold

⚠ Caution

Fixed "45", "45□" DIN rail manifold to the setting side with screws, fix points as follows: 2 to 5 stations: 2 points 6 to 10 stations : 3 points 11 to 15 stations: 4 points 16 to 20 stations: 5 points
If fixed at lesser points than specified and use it, there could be a warp or torsion in the DIN rail and the manifold and lead to bring some troubles such as air leakage.

Solenoid Valve Mounting

⚠ Caution

Mount it so that there is no slippage or deformation in gaskets, and tighten with the tightening torque as shown below.

Model	Thread size	Tightening torque
SX3000	M2	0.17 N·m
SX5000	M3	0.8 N·m
SX7000	M4	1.4 N·m

How to Change Port Block Assembly

The cylinder port block assembly can easily be changed. When changing block assembly, correct screw torque must be achieved. Cut off the air supply to confirm that no air is left in the manifold before starting operation. Remaining air or inappropriate installation may cause an accident.

● For SX5000

⚠ Caution

Mounting screw tightening torques

How to Order Valve Manifold Assembly

Ordering example

SS5X3-41-05-C6..... 1 set (Type 41, 5-station manifold base part no.)
 *SX3240-5G 2 sets (Double solenoid part no.)
 *SX3140-5G 2 sets (Single solenoid part no.)
 *SY3000-26-9A 1 set (Blanking plate assembly part no.)

* The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

Add the valve and option part number under the manifold base part number. In the case of complex arrangement, specify them on the manifold specification sheet.

- Connector assembly for L and M types.....Refer to page 1-6-8.
- Common connector ass'y for manifold.....Refer to page 1-6-9.

How to Order Valve Manifold Assembly

Ordering example

SS5X3-41P-06-C6 1 set (Type 41P, 6-station manifold base part no.)
 *SY3000-26-10A 1 set (Blanking plate assembly part no.)
 *SX3140-5MOZ 3 sets (Single solenoid part no.)
 *SX3240-5MOZ 2 sets (Double solenoid part no.)
 *SX3000-23-1A 3 sets (Connector assembly no.)
 *SX3000-23-2A 2 sets (Connector assembly no.)

* The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

Add the valve and option part number under the manifold base part number. In the case of complex arrangement, specify them on the manifold specification sheet.

How to Order Connector Assembly

- Positive common specifications
For single solenoid: SX3000-23-1A
For double solenoid, 3 position: SX3000-23-2A
- Negative common specifications
For single solenoid: SX3000-24-1A
For double solenoid, 3 position: SX3000-24-2A

For detailed information on connector assembly, refer to page 1-6-9.

- Multiple valve wiring is simplified through the use of the flat cable connector.
- Clean appearance

In case of a flat cable style, each valve is wired on the print board of manifold base to allow the external wiring to be piped all together with 26 pins MIL connector.

How to Order Valve Manifold Assembly

Ordering example

SS5X3-45-05D-C6 1 set (Type 45, 5-station manifold base part no.)
 *SX3000-75-1A 1 set (Blanking plate assembly part no.)
 *SX3140-5G 2 sets (Single solenoid part no.)
 *SX3240-5G 2 sets (Double solenoid part no.)

* The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

The valve arrangement is numbered as the 1st. station from D side regardless of the mounting position of SUP/EXH block assembly. In ordering, specify the part nos. in the order from the 1st. station on D side. Besides, when the arrangement will be complicated, fill out the Manifold Specification Sheet to instruct us.

How to Increase Manifold Bases

Station expansion is possible at any position.

- Loosen bolt (a) fixing the manifold base until it begins to turn idly. (While pressing DIN rail release buttons (c) at two locations, separate the manifold base from the DIN rail.)
- Press manifold block assembly splitting button (b), that are at the location where manifold bases are to be added, until button (b) locks, and then separate the block assemblies.
- Mount additional manifold block assembly on the DIN rail as shown in the figure.
- Press the block assembly until a click sound is produced, and tighten the bolts (a) to fix them to the DIN rail.
⚠ Caution (Tightening torque: 1.4 N·m)
 (While lightly holding the blocks after fixing an end block on one side, tighten the other end block for better sealing.)

Fig. (1) Block mounting procedure

⚠ Caution

- When adding manifold bases to use more than 10 stations, add SUP/EXH block assembly, as well.
- When bolt (a) for the end block is not sufficiently tightened during reassembly, air leakage may result. Before supplying air, check that there is no gap between blocks and that the manifold block is firmly fixed to the DIN rail in order to ensure air supply without leakage.

Hook this section on the DIN rail and press in the direction of the arrow until a click sound is generated.

How to Change Fitting Assembly

Type 45 manifold permits change in the A and B port sizes by changing the manifold block fitting assembly.

After removing the valve, remove the clip with a screwdriver. To mount a new fitting assembly insert it and then insert a clip so it does not come out of the manifold block.

Internal Wiring of Manifold

Type 45(N)F: D-sub Connector

A D-sub connector used for electric wiring reduces labor during wiring operation. Connectors conforming to MIL are used for interchangeability.

<For positive common (45F)>

<For negative common (45NF)>

- The power source terminal is used for connecting to an external power source.
- The above diagram is the double wiring specifications for up to 10 stations. When the wiring specifications are specified on the manifold specification sheet, the valve assignment for the connector number will differ from the above diagram. For more information, please contact SMC.
- When using a single solenoid valve, connect wire to SOL.A.
- The maximum number of stations is 20 in terms of manifold bases, as well as solenoids. (Please consult with SMC for more stations.)
- Regardless of the connector mounting position, stations are to be counted from D side as the 1st one.

Type 45(N)P: Flat Ribbon Cable (26 pins)

A flat cable connector used for electric wiring reduces labor during wiring operation. Connectors conforming to MIL are used for interchangeability.

<For positive common (45P)>

<For negative common (45NP)>

- The power source terminal is used for connecting to an external power source.
- The above diagram is the double wiring specifications for up to 10 stations. When the wiring specifications are specified on the manifold specification sheet, the valve assignment for the connector number will differ from the above diagram. For more information, please contact SMC.
- When using a single solenoid valve, connect wire to SOL.A.
- The maximum number of stations is 20 in terms of manifold bases, as well as solenoids. (Please consult with SMC for more stations.)
- Regardless of the connector mounting position, stations are to be counted from D side as the 1st one.

Type 45(N)PG: Flat Ribbon Cable (20 pins)

A flat cable connector used for electric wiring reduces labor during wiring operation. Connectors conforming to MIL are used for interchangeability.

Type 45(N)PH: Flat Ribbon Cable (10 pins)

A flat cable connector used for electric wiring reduces labor during wiring operation. Connectors conforming to MIL are used for interchangeability.

<For positive common (45PG)> <For negative common (45NPG)>

- The power source terminal is used for connecting to an external power source.
- The above diagram is the double wiring specifications for up to 8 stations. When the wiring specifications are specified on the manifold specification sheet, the valve assignment for the connector number will differ from the above diagram. For more information, please contact SMC.
- When using a single solenoid valve, connect wire to SOL.A.
- The maximum number of stations is 16 in terms of manifold bases, as well as solenoids. (Please consult with SMC for more stations.)
- Regardless of the connector mounting position, stations are to be counted from D side as the 1st one.

<For positive common (45PH)> <For negative common (45NPH)>

- The power source terminal is used for connecting to an external power source.
- The above diagram is the double wiring specifications for up to 4 stations. When the wiring specifications are specified on the manifold specification sheet, the valve assignment for the connector number will differ from the above diagram. For more information, please contact SMC.
- When using a single solenoid valve, connect wire to SOL.A.
- The maximum number of stations is 8 in terms of manifold bases, as well as solenoids. (Please consult with SMC for more stations.)
- Regardless of the connector mounting position, stations are to be counted from D side as the 1st one.

Internal Wiring of Manifold

Type 45T: Terminal Block

A terminal block style permits direct cable connection without treatment of lead wires.

- The maximum number of stations is 8 in terms of manifold bases, as well as solenoids. (Please consult with SMC for more stations.)
- The above diagram is the double wiring specifications for up to 4 stations. When the wiring specifications are specified on the manifold specification sheet, the valve assignment for the connector number will differ from the above diagram. For more information, please contact SMC.
- When using a single solenoid valve, connect wire to SOL.A.
- Regardless of the connector mounting position, stations are to be counted from D side as the 1st one.
- There is no polarity in the COM wiring. Supply positive power for +COM spec. and negative power for -COM spec.

Type 45T1: Terminal Block

- The maximum number of stations is 17 in terms of manifold bases, as well as solenoids. (For more stations, please contact SMC.)
- Regardless of the connector mounting position, stations are to be counted from D side as the 1st one.
- There is no polarity in the COM wiring. Supply positive power for +COM spec. and negative power for -COM spec.

Internal Wiring of Manifold

Type 45G: Flat Ribbon Cable (PC Wiring System compatible)

It is the manifold for 20 pins flat ribbon cable connector which is compliant for PC wiring system.

Electric circuit diagram (Below wiring is the case of all double solenoid connections.)

- The maximum number of stations is 16 in terms of manifold bases, as well as solenoids. (For more stations, please contact SMC.)
- Regardless of the connector mounting position, stations are to be counted from D side as the 1st one.

Refer to the separate catalog CAT.S02-20 for the details of PC Wiring System.

SS5X□-45□ Wiring of Plug-in Type

Power terminal is equipped with plug-in manifold of Series SX as standard.
Power terminal enables the power supply to valve from either of manifold or controller side.

1. Wiring example when using manifold power supply terminals

2. Wiring example when the power terminal of the manifold is not used (Power supplied at controller or in wiring)

⚠ Caution

- Single wire, COM position, etc. of PLC are different from each manufacturer. When connecting with PLC, read the specifications carefully and understand the electrical circuit. Poor wiring could cause damage to PLC, power source, etc. as well as manifold and valve.

How to Increase Manifold Bases

- (1) Loosen bolt (a) fixing the manifold base until it begins to turn idly. (While pressing DIN rail release button (c), separate the manifold base from the DIN rail.)
- (2) Additional bases are to be added to the U side. Press splitting button (b) of the manifold block assembly on the U side until button (b) locks, and then separate the block assemblies.
- (3) Separate the connector block assembly in the same manner as 2, and remove the connector mounting screw shown in Fig. (1).
- (4) Loosen the valve mounting screw on the U side, remove the valve, and take out the receptacle housing. (Refer to Fig. (2).)
- (5) Insert the common wire (red) of the manifold block assembly to be added into the pin insertion section (N mark) of the receptacle housing that was taken out in 4, mount it on the manifold block, and mount the removed valve.
- (6) As shown in Fig. (3), mount the additional manifold block assembly on the DIN rail on the U side. Refer to the circuit diagram, and insert the lead wire (SOL.A: Black, SOL.B: White) as shown in Fig. (4).
- (7) Press the blocks against each other until a click sound is produced, place the lead wire in the manifold block, and close the lid without pinching the lead wire.
- (8) While lightly holding the blocks together so that there are no gaps between them, secure them to the DIN rail by tightening the screws A. (Tightening torque: 1.4 N·m)

⚠ Caution

1. Depending on the connector, there is a limit to the number of solenoids. When all manifold stations are wired for double solenoid valves, expansion of the manifold may not be possible. Please consult with SMC for more information.
2. The manifold block assembly mounting position for additional manifold bases is always on the U side, because wires are connected to respective connectors sequentially from the D side.
3. When bolt (a) for the end block is not sufficiently tightened during reassembly, air leakage may result. Before supplying air, check that there is no gap between blocks and that the manifold block is firmly fixed to the DIN rail in order to ensure air supply without leakage.

How to Change Fitting Assembly

Type 45 manifold permits change in the A and B port sizes by changing the manifold block fitting assembly. After removing the valve, remove the clip with a screwdriver. To mount a new fitting assembly insert it and then insert a clip so it does not come out of the manifold block.

How to Order Valve Manifold Assembly

Ordering example

SS5X3-45SA-05U-C6.....1 set (45S with serial 5-station manifold base no.)
 *SX3140-5LOZ.....2 sets (Single solenoid part no.)
 *SX3240-5LOZ.....3 sets (Double solenoid part no.)

* The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

- They will be assembled in the order listed starting at the first station at the D side whether the connector box is located at either end. When ordering with the double wiring specification, specify it in order, beginning with the 1 station on the D side.
- For manifolds with more than 8 stations (9 to 16), special wiring is required. Please use the manifold specification sheet.
- Serial unit can be mounted on D side only.

How to Order Valve Manifold Assembly

Ordering example

SS5X3-45S1AD-05U-C6... 1 set (45S1 with serial 5-station manifold base no.)
 *SX3140-5LOZ..... 2 sets (Single solenoid part no.)
 *SX3240-5LOZ..... 3 sets (Double solenoid part no.)

* The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

- They will be assembled in the order listed starting at the first station at the D side whether the connector box is located at either end. When ordering with the double wiring specification, specify it in order, beginning with the 1 station on the D side.
- For manifolds with more than 8 stations (9 to 16), special wiring is required. Please use the manifold specification sheet.

Internal Wiring of Manifold

Serial type 45S3

- For specifications on OMRON Corp's transmitter terminals, refer to the instruction manual or the catalog of transmitter terminals, etc.
- When using a single solenoid, connect wire to A side.
- The above diagram is the double wiring specifications for up to 8 stations. When the wiring specifications are specified on the manifold specification sheet, the valve assignment for the number of transmission unit will differ from the above diagram. For more information, please contact SMC.
- The maximum number of stations is 16 in terms of manifold bases, as well as solenoids. (Please consult with SMC for more stations.)

Caution

- The wiring specifications for SS5X³-45S30 are different from those for SS5X³-45PG.

Double solenoid (External pilot specifications)
SX3140R-5G (3 sets)

SS5X3-45-05DRS-C6-1 set (External pilot specifications built-in silencer part no.)
*SX3140R-5G..... 3 sets (Single solenoid part no.)
*SX3240R-5G..... 2 sets (Double solenoid part no.)

*The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

They will be assembled in the order listed starting at the first station at the D side even if SUP/EXH block assembly is located at either end.

In ordering, specify the part nos. in the order from the 1st. station on D side. Besides, when the arrangement will be complicated, fill out the Manifold Specification Sheet to instruct us.

For manifolds with SUP/EXH block at each end of the manifold, external pilot ports and silencers will be also located at each end of the manifold.

To order the SUP/EXH block assembly (SX3/5000-51-1A) mounted at a location other than the ends of manifold, refer to the manifold specification sheet along with assembly part no.

*SX3140R-5LOZ..... 3 sets (Single solenoid part no.)
*SX3240R-5LOZ..... 2 sets (Double solenoid part no.)

* The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

They will be assembled in the order listed starting at the first station at the D side even if SUP/EXH block assembly is located at either end.

In ordering, specify the part nos. in the order from the 1st. station on D side. Besides, when the arrangement will be complicated, fill out the Manifold Specification Sheet to instruct us.

For manifolds with SUP/EXH block at each end of the manifold, external pilot ports and silencers will be also located at each end of the manifold.

To order the SUP/EXH block assembly (SX3/5000-51-2A) mounted at a location other than the ends of manifold, refer to the manifold specification sheet.

Main Valve Fluoro Rubber Specifications -X90

Fluoro rubber is used for rubber parts of the main valve to allow use in applications such as the following.

1. When using a lubricant other than the recommended turbine oil, and there is a possibility of malfunction due to swelling of the spool valve seals.
2. When ozone enters or is generated in the air supply.

Applicable solenoid valves: Series SX3□²₄0, SX5□²₄0, SX7□²₄0

The specifications and performance are the same as those of standard models.

Note) Because in series -X90 fluoro rubber is used for only main valve, the rubber parts of the application/usage in conditions requiring heat resistance should be avoided.
