

Air Slide Table

Series MXJ

Height: 10 mm/Width: 20 mm/Length: 43 mm (MXJ4)

Traveling parallelism: 0.005 mm

Front mounting accuracy: 0.01 mm

Top mounting accuracy: 0.03 mm

Integrated front mounting part and table result in a highly accurate and rigid top and front mounting surface.

MTS

Note 1)

Note 2)

Note 1) Right angle degree of the front mounting surface to the body mounting surface

Note 2) Parallelism of the top mounting surface to the body mounting surface

M3 or M4 size screws are used for body mounting.

(Except for MXJ4 top mounting)
Prevents damage to the screws when mounting

Model	MXJ4	MXJ6	MXJ8
Threads for through-hole mounting on the top	M2.5	M3	M3
Threads for tap mounting on the bottom	M3	M4	M4

Auto switch mountable in two rows

- Auto switches can be mounted in two rows for all models in the range of **MXJ4 to MXJ8**.
- Two auto switches can be mounted with a 5 mm or longer stroke.

Series MXJ

Model Selection

Procedure	Formula/Data	Selection Example
1 Operating Conditions Enumerate the operating conditions considering the mounting position and workpiece configuration.	- Model to be used - Type of cushion - Mounting orientation - Average speed V_a (mm/s) - Load mass W (kg) - Overhang (mm)	Cylinder: MXJ6-10 Cushion: Rubber stopper Mounting: Horizontal wall mounting Average speed: $V_a = 100$ mm/s Load mass: $W = 0.1$ kg $L_2 = 40$ mm $L_3 = 50$ mm 
2 Load Mass Find the collision speed V (mm/S). Confirm that the load mass W (kg) does not exceed the value in the graph.	$V = \frac{1.4 \cdot V_a}{*}$ * Correction factor (Reference value) Graph (1)	$V = 1.4 \times 100 = 140$ Confirm that $V = 140$ and $W = 0.1$ do not exceed the values in Graph (1). Applicable because it does not exceed the value in Graph (1). 
3 Load Factor		
3-1 Load Factor of Static Moment Find the static moment M (N·m). Find the allowable static moment M_a (N·m). Find the load factor of the static moment.	$M = W \times 9.8 (L_n + A_n)/1000$ Corrected value of moment center position distance A_n : Table (1) Pitch, Yaw moment: Graph (2) Roll moment: Graph (3) $\alpha_1 = M/M_a$	Examine M_r . $M_r = 0.1 \times 9.8(40 + 3)/1000 = 0.042$ $A_2 = 3$ Obtain $M_{ar} = 0.6$ from $V_a = 100$ in Graph (3). $\alpha_1 = 0.042/0.6 = 0.07$ 
3-2 Load Factor of Dynamic Moment Find the dynamic moment M_e (N·m). Find the allowable dynamic moment M_{ea} (N·m) from graph. Find the load factor of the dynamic moment.	$M_e = 1/3 \cdot W_e \times 9.8 (L_n + A_n)/1000$ mass equivalent to impact $W_e = \delta \cdot W \cdot V$ δ : Bumper coefficient Rubber stopper: 4/100 Metal stopper: 16/100 Corrected value of moment center position distance A_n : Table (1) Pitch, Yaw moment: Graph (2) $\alpha_2 = M_e/M_{ea}$	Examine M_{ep} . $M_{ep} = 1/3 \times 0.56 \times 9.8 \times (40+3)/1000 = 0.078$ $W_e = 4/100 \times 0.1 \times 140 = 0.56$ $A_3 = 3$ Obtain $M_{eap} = 1.1$ from $V = 140$ in Graph (2). $\alpha_2 = 0.078/1.1 = 0.07$  Examine M_{ey} . $M_{ey} = 1/3 \times 0.56 \times 9.8 \times (50+11)/1000 = 0.116$ $W_e = 0.56$ $A_3 = 11$ Obtain $M_{eay} = 1.1$ from $V = 140$ in Graph (2). $\alpha_2' = 0.116/1.1 = 0.1$ 
3-3 Sum of Load Factors Possible to use if the sum of the load factors does not exceed 1.	$\alpha_1 + \alpha_2 < 1$	$\alpha_1 + \alpha_2 + \alpha_2' =$ Applicable because $0.07 + 0.07 + 0.1 = 0.24 < 1$

Fig. (1) Overhang: L_n (mm), Correction Value of Moment Center Position Distance: A_n (mm)

	Pitch moment	Yaw moment	Roll moment
Static moment			
Dynamic moment			

Note) Static moment: Moment generated by gravity
Dynamic moment: Moment generated by impact when colliding with stopper

Graph (2) Allowable Moment
Pitch Moment: M_{ap} , M_{eap}
Yaw Moment: M_{ay} , M_{eay}

Note) Use the average speed when calculating static moment.
Use the collision speed when calculating dynamic moment. (refer to page 171.)

Table (1) Correction Value of Moment Center Position Distance: A_n (mm)

Model	Corrected value of moment center position distance (Refer to Fig. 2.)		
	A1	A2	A3
MXJ4	10	3	10
MXJ6	10	3	11
MXJ8	12	4	13

Table (3) Maximum Allowable Moment: M_{max} (N·m)

Model	Pitch/Yaw moment: M_{pmax}/M_{ymax}	Roll moment: M_{rmax}
MXJ4	1.1	0.6
MXJ6	1.1	0.6
MXJ8	1.5	1.0

The above value represents the maximum value of allowable moment. For the maximum allowable moment for each piston speed, please refer to Graph (2) and (3).

Symbol

Symbol	Definition	Unit	Symbol	Definition	Unit
A_n ($n = 1$ to 3)	Corrected value of moment center position distance	mm	F	Allowable static load	N
L_n ($n = 1$ to 3)	Overhang	mm	V	Collision speed (Average speed x 1.4)	mm/s
M (M_p , M_y , M_r)	Static moment (pitch, yaw, roll)	N·m	Va	Average speed	mm/s
Ma (M_{ap} , M_{ay} , M_{ar})	Allowable static moment (pitch, yaw, roll)	N·m	W	Load mass	kg
Me (M_{ep} , M_{ey})	Dynamic moment (pitch, yaw)	N·m	Wa	mass equivalent to impact	kg
Mea (M_{eap} , M_{eay})	Allowable dynamic moment (pitch, yaw)	N·m	Wmax	Max. allowable load mass	kg
Mmax (M_{pmax} , M_{ymax} , M_{rmax})	Max. allowable moment (pitch, yaw, roll)	N·m	α	Load factor	—

Fig. (2) Allowable Static Load: F (N)

Graph (1) Load Mass: W
MXJ4

MXJ6

MXJ8

Table (4) Allowable Static Load: F (N)

Model	Allowable static load
MXJ4	300
MXJ6	300
MXJ8	500

The above value represents the applicable load at the position where the moment does not work at the time of stop. Factors such as impact, etc. are not in consideration with the value.

Air Slide Table

Made to Order
(Refer to page 1982 for details.)

Symbol	Specifications
-X39	Fluororubber seals
-X42	Anti-corrosive guide unit
-X45	EPDM seals

Specifications

Model	MXJ4	MXJ6	MXJ8
Bore size (mm)	4.5	6	8
Piping port size	M3 x 0.5		
Fluid	Air		
Action	Double acting		
Operating pressure	0.15 to 0.7 MPa		
Proof pressure	1.05 MPa		
Ambient and fluid temperature	-10 to 60°C		
Operating speed range	50 to 500 mm/s (Metal stopper: 50 to 200 mm/s)		
Cushion	Rubber bumper (Metal stopper: Without cushion)		
Lubrication	Non-lube		
Stroke adjuster	Standard equipment		
Stroke adjusting range (metal stopper)	Both ends each 0 to 5 mm		
Auto switch	Reed auto switch (2-wire, 3-wire) Solid state auto switch (2-wire, 3-wire) 2-color indication solid state auto switch (2-wire, 3-wire)		
Stroke length tolerance	+1 0 mm		

Standard Stroke

Model	Standard stroke (mm)
MXJ4	5, 10
MXJ6	5, 10, 15
MXJ8	5, 10, 15, 20

Option

Adjuster option	Metal stopper	Extension end (CS)	Stroke adjustment range 0 to 5 mm
		Retraction end (CT)	
		Both ends (C)	
Functional option	Axial piping type (P)		Stroke adjuster is mountable on the axial piping.

Theoretical Output

Model	Bore size (mm)	Rod size (mm)	Operating direction	Piston area (mm ²)	Operating pressure (MPa)						(N)
					0.2	0.3	0.4	0.5	0.6	0.7	
MXJ4	4.5	2	OUT	16	3	5	6	8	10	11	
			IN	13	3	4	5	6	8	9	
MXJ6	6	3	OUT	28	6	8	11	14	17	20	
			IN	21	4	6	8	11	13	15	
MXJ8	8	4	OUT	50	10	15	20	25	30	35	
			IN	38	8	11	15	19	23	26	

Note) Theoretical output (N) = Pressure (MPa) x Piston area (mm²)

Mass

Basic Style (Without switch rail) MXJ□□-□□N

(g)

Model	Standard stroke (mm)				Additional mass of adjuster option	
	5	10	15	20	Extension end	Retraction end
MXJ4	40	40	—	—	2	6
MXJ6	50	50	55	—	2	8
MXJ8	70	70	90	90	2	12

Axial Piping Type (Without switch rail) MXJ□□-□□PN

(g)

Model	Standard stroke (mm)				Additional mass of adjuster option	
	5	10	15	20	Extension end	Retraction end
MXJ4	50	50	—	—	2	6
MXJ6	60	60	65	—	2	8
MXJ8	85	85	110	110	2	12

Additional Mass of Switch Rail

(g)

Model	Standard stroke (mm)			
	5	10	15	20
MXJ4	5	5	—	—
MXJ6	5	5	6	—
MXJ8	5	5	7	7

Table Accuracy

B side parallelism to A side	0.03
B side traveling parallelism to A side	0.005
C side perpendicularity to A side	0.01
M dimension tolerance	± 0.05
Radial clearance (μm)	0 (Note)
Non-rotating table accuracy (deg)	0 (Note)

Note) In theory, radial clearance and non-rotating table accuracy are zero by the preloaded specification. However, in some actual cases, a moment can be applied and can cause deflection in an individual part. Therefore, refer to the table displacement amount on page 176.

Optional Specifications

Rail assembly for mounting auto switch

When auto switch is mounted on air slide table without rail (MXJ□-□N), this assembly is used.

Applicable size	Switch rail part no.	Note
MXJ4-5	MXJ-AD4-10	With magnet and mounting screw
MXJ4-10		
MXJ6-5	MXJ-AD6-10	
MXJ6-10		
MXJ6-15	MXJ-AD6-15	
MXJ8-5	MXJ-AD6-10	
MXJ8-10		
MXJ8-15	MXJ-AD8-20	
MXJ8-20		

Stepped positioning pin

MXJ-LP

Use the optional stepped positioning pin that is provided because the positioning pin hole for the table is a through hole.

Table Deflection (Reference Values)

Table displacement due to pitch moment load

Table displacement when loads are applied to the section marked with the arrow at the full stroke.

MXJ4

MXJ6

MXJ8

Table displacement due to yaw moment load

Table displacement when loads are applied to the section marked with the arrow at the full stroke.

MXJ4

MXJ6

MXJ8

Table displacement due to roll moment load

Table displacement when loads are applied to the section marked with the arrow with the slide table retracted.

MXJ4

MXJ6

MXJ8

The graphs below show the table displacement when the static moment load is applied to the table. The graphs do not show the loadable mass. Refer to the Model Selection for the loadable mass.

Dimensions Note) In the MXJ4, there is no change in total length by stroke.

Basic style (Without switch rail)

MXJ4-□□□N

Vacuum port M3 x 0.5 (Plugged when the product is a symmetric type.)
(Not plugged in the case of the clean series)

Note 1) Use an optional stepped positioning pin. (See page 175.)
Note 2) Since the body and table are constructed with a magnetic substance, it becomes magnetized when magnets, etc. are attached to them, and this may cause the auto switch malfunction.

Note 3) If workpiece holding bolts are used, they can touch the body and cause malfunctions, etc.
Refer to the Specific Product Precautions.

Vacuum port M3 x 0.5 (Plugged when the product is not a symmetric type.)
(Not plugged in the case of the clean series)

Operating port 2 x M3 x 0.5
(Plugged when the product is not a symmetric type.)

	Stroke				Stroke			
	5	10	15	20	5	10	15	20
MXJ4	11	6	—	—	3.5	3.5	—	—
MXJ6	11	6	5	—	3.5	3.5	4.5	—
MXJ8	11	6	12	7	4.5	4.5	3.5	3.5

Operating Range

Auto switch model	Applicable bore size (mm)		
	ø4	ø6	ø8
D-A9□/A9□V	4	4	4
D-F8□	2	2	2
D-M9□/M9□V	2	2.5	2.5
D-M9W□/M9W□V			

* Since the operating range is provided as a guideline including hysteresis, it cannot be guaranteed (assuming approximately ±30% dispersion). It may vary substantially depending on an ambient environment.

Auto Switch Mounting

⚠ Caution

Auto Switch Mounting Tool

- When tightening the auto switch mounting screw (included with auto switch), use a watchmaker's screwdriver with a handle about 5 to 6 mm in diameter.

Tightening Torque

Auto switch model	Tightening torque (N·m)
D-F8□ D-A9□(V)	0.10 to 0.20
D-M9□(V) D-M9□W(V)	0.05 to 0.15

Caution on handling symmetric type

⚠ Caution

- Maintain a minimum space if standard type and symmetric type are used side by side.
If the space is insufficient, it may cause auto switches to malfunction.

L Dimension

Without shielding plate	8 mm
With shielding plate	3 mm

Placing in the shield plate (0.2 to 0.3 mm iron plate) between the products allows the distance to be smaller.

When using the following solid state auto switches (D-M9□(V), M9□W(V), F8□), mount them in the illustrated direction. The lower slot is for extension end detection.

• Lead wire, in-line entry (D-M9□, M9□W)

Extension end Retraction end

• Lead wire, perpendicular entry (D-M9□V, M9□WV, F8□)

Extension end Retraction end

Other than the applicable auto switches listed in “How to Order”, the following auto switches can be mounted.

* Normally closed (NC = b contact) solid state auto switches (D-F9G/F9H types) and a solid state auto switch (D-F8) are also available. Refer to pages 1745 and 1746 for details.

Series MXJ

Specific Product Precautions 1

Be sure to read before handling. Refer to front matters 42 and 43 for Safety Instructions and pages 3 to 11 for Actuator and Auto Switch Precautions.

Selection

⚠ Caution

1. Operate loads within the range of the operating limits.

Select the model considering maximum loading mass and allowable moment. For details, refer to "Model Selection" on pages 171 and 172. When actuator is used outside of operating limits, eccentric loads on guide will be in excess of this causing vibration on guide, inaccuracy, and shortened life.

2. If intermediate stops by external stopper is done, avoid ejection.

If lurching occurs, damage can result. When making an intermediate stop with an external stopper to be followed by continued forward movement, first supply pressure to momentarily reverse the table, then retract the intermediate stopper, and finally apply pressure to the opposite port to operate the table again.

3. Do not use it in such a way that excessive external force or impact force could work on it.

This could result in damage.

Mounting

⚠ Caution

1. Do not scratch or dent on the mounting side of body, table and end plate.

The damage will result in a decrease in parallelism, vibration of guide and an increase in moving part resistance.

2. Do not scratch or dent on the forward side of the rail or guide.

This could result in looseness and increased operating resistance, etc.

⚠ Caution

3. Do not apply excessive power and load when work is mounted.

If the external force more than the allowable moment were applied, looseness of the guide unit or increased operating resistance could take place.

4. Flatness of mounting surface should be 0.02 mm or less.

Poor parallelism of the workpiece mounted on the body, the base, and other parts can cause vibration in the guide unit and increased operating resistance, etc.

5. Select the proper connection with the load which has external support and/or guide mechanism on the outside, and align it properly.

6. Avoid contact with the body during operation.

Hands, etc. may get caught in the stroke adjuster. Install a cover as a safety measure if there are instances to be near the slide table during operation.

7. Keep away from objects which are influenced by magnets.

Since a body has magnets built-in, do not allow close contact with magnetic disks, magnetic cards or magnetic tapes. Data may be erased.

8. Do not attach magnets to the body and table section.

Since the body and table are constructed with a magnetic substance, it becomes magnetized when magnets, etc. are attached to them, and this may cause malfunction of auto switches, etc.

Mounting

9. When mounting the body, use appropriate length of screws and do not exceed the maximum tightening torque.

Tightening with a torque above the limit could malfunction. Whereas tightening insufficiently could result in misalignment or come to a drop.

1. Body tapped

Model	Bolt	Maximum tightening torque (N·m)	Maximum screw-in depth ℓ (mm)
MXJ4	M3 x 0.5	1.14	5
MXJ6	M4 x 0.7	2.7	6
MXJ8	M4 x 0.7	2.7	6

2. Through-hole

Model	Bolt	Maximum tightening torque (N·m)	ℓ (mm)
MXJ4	M2.5 x 0.45	0.65	2.5
MXJ6	M3 x 0.5	1.14	3.5
MXJ8	M3 x 0.5	1.14	4

10. Use the below speed controllers and fittings.

If other speed controllers and fittings are used, they can interfere with the mounting surface.

Model	Side piping port	Axial piping port	Vacuum port
MXJ4	AS1200-M3	AS1200-M3	Miniature fittings M3 series
MXJ6	AS1200-M3	AS1201F-M3	
MXJ8	AS1201F-M3	AS1301F-M3	

Series MXJ

Specific Product Precautions 2

Be sure to read before handling. Refer to front matters 42 and 43 for Safety Instructions and pages 3 to 11 for Actuator and Auto Switch Precautions.

Mounting

⚠ Caution

1. Front mounting

⚠ Caution To prevent the workpiece holding bolts from touching the guide block, use bolts that are at least shorter than the maximum screw-in depth. If longer bolts are used, they can touch the guide and cause a malfunction.

Model	Bolt	Maximum tightening torque (N·m)	Maximum screw-in depth l (mm)
MXJ4	M3 x 0.5	1.14	3.5
MXJ6	M3 x 0.5	1.14	3.5
MXJ8	M3 x 0.5	1.14	3.5

2. Top mounting

⚠ Caution To prevent the workpiece holding bolts from touching the guide block, use bolts that are at least shorter than the maximum screw-in depth. If longer bolts are used, they can touch the guide and cause a malfunction.

Model	Bolt	Maximum tightening torque (N·m)	Maximum screw-in depth l (mm)
MXJ4	M3 x 0.5	1.14	4
MXJ6	M3 x 0.5	1.14	4
MXJ8	M3 x 0.5	1.14	5.5

1. Use a stepped positioning pin that is provided optionally because the positioning pin hole for the table is through.

(Refer to page 175.)

Operating Environment

⚠ Caution

1. Do not use in an environment, where the product could be exposed to liquids such as cutting oil, etc.

Using in an environment where the product could be exposed to cutting oil, coolant, oil, etc. could result in looseness, increased operating resistance, air leakage, etc.

2. Do not use in an environment, where the product could be exposed directly to foreign materials such as powder dust, blown dust, cutting chips, spatter, etc.

This could result in looseness, increased operating resistance, air leakage, etc.

Contact us regarding use in this kind of environment.

3. Do not use in direct sunlight.

4. When there are heat sources in the surrounding area, block off them off.

When there are heat sources in the surrounding area, radiated heat may cause the product's temperature to rise and exceed the operating temperature range. Block off the heat with a cover, etc.

5. Do not subject it to excessive vibration and/or impact.

Contact us regarding use in this kind of environment, since this can cause damage or a malfunction.

6. Be careful about the corrosion resistance of the linear guide.

Be careful that the body and table use martensitic stainless steel, which is inferior to austenitic stainless steel in terms of corrosion resistance. Rust may result especially in an environment that allows water drops from condensation to stay on the surface.

Caution on Adjuster Option

Stroke Adjuster

⚠ Caution

1. Refer to the below table for lock nut tightening torque.

Insufficient torque will cause a decrease in the positioning accuracy.

Model	Thread size	Tightening torque (N·m)
MXJ4	M2.5 x 0.45	0.36
MXJ6	M2.5 x 0.45	0.36
MXJ8	M3 x 0.5	0.63

2. When stroke adjuster is adjusted, do not hit the table with a wrench, etc.

This could result in looseness.

Specific Product Precautions 3

Be sure to read before handling. Refer to front matters 42 and 43 for Safety Instructions and pages 3 to 11 for Actuator and Auto Switch Precautions.

Caution on replacing standard type to symmetric type, and vice versa

⚠ Caution

Switch rail, axial piping plate and port location can be changed symmetrically. In the event of replacing them, secure with the tightening torque below.

Thread	Thread size	Tightening torque (N·m)
Cross-recessed head machine screw	M1.7 x 0.35	0.1
Stud	M3 x 0.5	0.3
Dedicated plug	M3 x 0.5	0.3
Hexagon socket set screw	M3 x 0.5	0.3

* No need to applying sealant to the dedicated plug, and stud when exchanging.
