Vacuum Pad/Bellows Type

 ø20, ø25, ø32, ø40, ø50

Adsorption transfer of workpiece with a soft film flexible packaging

**Thin film skirt and special shape rib**

<table>
<thead>
<tr>
<th>Thin film skirt</th>
<th>Special rib</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adapts to changes in soft packaging</td>
<td>Vacuum leakage reduced by improved sealing effect</td>
</tr>
</tbody>
</table>

Vacuum leakage reduced by improved sealing effect
Prevents the skirt from becoming caught

**Guide attachment function**

Acceleration/deceleration: Adsorption transfer possible at 4G*1
Deformation of pad and deflection of workpiece are reduced.
Sucking prevention

**FDA (USA Food and Drug Administration) regulations**
Compliant materials are used for pad and guide attachment.

**Blue colored pad**
Easy to distinguish the vacuum pad by color during contamination inspection

**ZP3P-JT Series**
Unstable workpiece such as bagged liquid or powder can be transferred.

- **Thin film skirt** Improved sealing
- **Guide attachment**
  - Prevents workpiece from being sucked into the pad
- **Special rib**
  - Vacuum leakage has been reduced.
  - Improved sealing performance
- **Liquid filled packaging**
- **Powder filled packaging**
- **Gas filled packaging**
- **Pouch packaging**

- **Labyrinth shape**
  - Sealed by contact of ribs
  - Prevents the skirt from becoming caught

**Guide attachment**

Deformation of pad and deflection of workpiece during adsorption transfer are reduced.

- **With guide attachment**
  - Small deformation and deflection
- **Without guide attachment**
  - Large deformation and deflection

**Transfer conditions**
- Pad diameter: ø40 [mm], Workpiece mass: 700 [g],
- Supply pressure: −85 [kPa], Acceleration/Deceleration: 4 [G]
5.5-Stage Bellows Type

- Adaptable to changes in height and angle of the workpiece
- Ease the impact to the contents

<table>

</tbody>
</table>

2. Depending on the achieved vacuum pressure, the theoretical lifting force exceeds the strength of the vacuum pad, deforming or breaking the pad.
The safety factor should be 16 times or more of the theoretical lifting force for horizontal lifting, and it should be 25 times or more for vertical lifting.

\[ W = P \times S \times 0.1 \times \frac{1}{t} \]
W: Lifting force [N]
P: Vacuum pressure [kPa]
S: Pad area [cm²]
t: Safety factor
Horizontal lifting: 16 or more
Vertical lifting: 25 or more

3. When a bagged workpiece is lifted, the skirt changes its form according to the changing of workpiece form.
As the vacuum pad skirts change its form, the actual lifting force may be below the theoretical lifting force. Before use, please check with the customer’s equipment.

4. Mount the guide attachment for use.
Without the guide attachment, the vacuum pad will be deformed, causing adsorption failure.

5. When the vacuum pad is pressed onto the workpiece, keep the stroke range.
When the maximum stroke is exceeded, the guide attachment may contact the adapter, leading to malfunction.

6. When the guide attachment is inserted to the vacuum pad, the guide attachment may damage or break the skirt if it is pulled with excessive force as the skirt is thin.
Damage or breakage of the vacuum pad leads to adsorption failure.

7. When the achieved vacuum pressure is low (approx. –20 [kPa]), the vacuum pad does not completely operate its stroke.
In this case, the guide attachment is not inserted to the adapter and the effect of guide function is not realized adequately.

8. Use the product within the operating temperature range.
The heat resistant temperature of the guide attachment (made of synthetic resin) is 90°C.
Operate within the specified operating temperature range (–30 to 90°C).
For temperature outside of the operating temperature range, contact SMC representative.

9. Do not interfere with the vacuum pad stroke with an external stopper.
The vacuum pad will be deformed, causing adsorption failure or breakage. Or the workpiece will be separated and come out.

10. Vacuum pad is a consumable. Please replace it when crack, wear, or deformation is confirmed during the periodic maintenance.

11. Before use, please check the transfer conditions with the customer’s equipment.
Products are confirmed as transferable under the SMC’s specific testing conditions in the table below, but these are not guaranteed values. The transfer ability varies depending on the workpiece material, the friction between the pad and workpiece, moment, wind, vibration, etc. The test with the customer’s equipment is necessary.

<table>
<thead>
<tr>

</tbody>
</table>

* Adsorption is confirmed for 1 stroke. Not for a back and forth or repeated operation.
Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC), and other safety regulations.

Caution:
Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

Warning:
Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

Danger:
Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.

2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.

3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

   1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.

   2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.

   3. An application which could have negative effects on people, property, or animals requiring special safety analysis.

   4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

Safety Instructions
Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.

Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements.”

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.

   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

-2) Vacuum pads are excluded from this 1 year warranty.

   A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.

   Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.

2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

Caution

∗1) ISO 4414: Pneumatic fluid power – General rules relating to systems.

ISO 4413: Hydraulic fluid power – General rules relating to systems.

IEC 60204-1: Safety of machinery – Electrical equipment of machines.

Part 1: General requirements)

ISO 10218-1: Manipulating industrial robots – Safety.
