</table>

**NOTE 1:** All mounting brackets come with two mounting screws.
**NOTE 2:** The Side Mount is standard on the head side of all models. Other head side mounting brackets are optional and are sold separately.
**NOTE 3:** Standard type and non-rotating type cylinders are offered with various rod side mounting as standard, as is explained in the individual model information in this catalog. Consult the Order Examples that appear following the specifications of standard and non-rotating type cylinders for a comprehensive overview of the various models available.
**NOTE 4:** The Foot Mount cannot be used on the rod side of non-rotating cylinders. However, the Foot Mount can be used on the head side of all these models.

### CHANGING MOUNTING BRACKETS

#### ROD SIDE MOUNTING BRACKETS

Standard type cylinders:
- Remove rod side mounting bracket screws and remove bracket.
- Reverse procedure for replacing mounting bracket.

Non-rotating type cylinders:
- Remove the plate assembly by unscrewing the plate set screws before removing the rod side mounting bracket.
- Re-mount by securing mounting bracket to cylinder head. Next, attach plate assembly to piston rod with set screws. Maintain a clearance of 0.02" (0.5mm) between plate assembly and rod bushing when rod is in the fully retracted position.

#### HEAD SIDE MOUNTING BRACKETS

Unscrew head side mounting bracket screws and remove bracket. Reverse procedure for replacing mounting bracket.

1. For optimum performance be sure that mounting bracket is attached to cylinder body squarely and accurately. Bracket must not protrude from cylinder surface.
2. Use mounting screws supplied with brackets. If other screws are used they should be to the following specifications.

<table>
<thead>
<tr>
<th>Bore size - in. (nom.) / mm (actual)</th>
<th>Screw size</th>
<th>Thread length (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/4 (6)</td>
<td>M2 (6)</td>
<td>4.5</td>

NOTE: Do not use 4 - M8x0.5 for mounting cylinders. This is for sensor switch mounting.

NOTE 1: 0.079 in. (2mm) = 0.002 (0.05)
NOTE 2: 0.079 in. (2mm) = 0.002 (0.05)
0.472 in. (12mm) = 0.002 (0.05)
0.709 in. (18mm) = 0.002 (0.05)
CAUTIONS WHEN MOUNTING CYLINDER WITH SENSOR SWITCHES

When mounting multi-mount cylinders with sensor switches in close proximity, install shield plate/s to prevent unintended actuation of a sensor by a neighboring cylinder.

LUBRICATION

Lubrication is not required. If lubricating oils are used ensure that they are of sufficient viscosity to assure adequate lubrication. Thinner or low viscosity oils (spindle oil, machine oil, etc.) do not provide a good residual film of lubrication.

MEDIA/FILTRATION

Humphrey Multi-Mount cylinders are designed for use with compressed air or inert gases. Consult factory if using any other media. Compressed air should be clean and uncontaminated. When in doubt, install an air filter with filtering capacity of 40 microns. Periodically remove and clean or replace filter element.

CAUTION

Compressed air is powerful and may be dangerous. Before attempting to remove a component from an air line or system, always disconnect the supply air and thoroughly exhaust the line or system. Never attempt to construct, operate, or service anything using compressed air unless you have been properly trained to do so. Failure to heed this warning could result in SERIOUS, EVEN FATAL, PERSONAL INJURY.
