2-Color Display High Precision Digital Pressure Switch

The settings of the master pressure switch (source of copy) can be copied to the slave pressure switches.

- Reduction in setting work
- Prevention of mistakes in setting

Can copy to up to 10 switches simultaneously.

Applicable fluid
Air, Non-corrosive gas, Non-flammable gas

Easy handling!
Raised rubber switch buttons for easy and comfortable operation

3-step setting

1. Push
2. Adjust to the set-value by the or button.
3. Push

Completion of setting

2-color display
See abnormal values at a glance.

IP65 compliant

RoHS compliant

1 switch
2 switches
10 switches

Master pressure switch (source of copy)
Slave pressure switch

CAT.NAS100-79A
Piping Variations

Series

Rated pressure range
-14.5 to 145.0 psi
0 psi

Set pressure range
14.5 to 15.22 psi
-15.22 to 15.2 psi
-15.2 to 152.3 psi

Withstand pressure
72.5 psi
72.5 psi
218 psi

Min. unit setting
0.01 psi
0.02 psi
0.1 psi

Output
• NPN or PNP open collector 2 outputs + Copy function
• NPN or PNP open collector 2 outputs + Analog output (voltage or current)/Auto-shift input

Piping
R1/8, NPT1/8 (With M5 female thread), Rc1/8, G1/8, M5 female thread ø4, ø6 one-touch fitting

Secret code setting function
A function to prevent operation by anyone other than the designated operator while the keys are locked.

Power-saving function
The display can be turned off to save the power consumption. (Power consumption reduced by max. 20%)

Resolution conversion function
The flickering on the display can be eliminated.

MPa/kPa switching function
The indication unit for vacuum, compound pressure and positive pressure can be integrated into either MPa or kPa.

Features 1
2-Color Display High Precision Digital Pressure Switch
Series ZSE40A(F)/ISE40A

How to Order

ZSE40A – 01 – X – P

ISE40A – 01 – Y – P

Rated pressure range
ISE40A –14.5 to 145.0 psi
ZSE40A 0.00 to –14.69 psi
–14.50 to 14.50 psi

For positive pressure
For vacuum/compound pressure

Option 1

- Made to Order
- Combination of piping specifications with option 1 and part numbers of options

Option 2

- Symbol
- Calibration certificate
- X501
- M12 4-pin pre-wired connector

Lead wire length 3 m
Lead wire length 100 mm

Refer to page 17 for details.

Refer to page 17 for details.

Note 1) Under the New Measurement Law, sales of switches with the unit switching function are not allowed for use in Japan.

Note 2) Fixed unit:
For vacuum/compound pressure: kPa
For positive pressure: MPa

When optional parts are required separately, use the following part numbers to place an order:

M5 x 0.8
ø4 one-touch fitting
ø6 one-touch fitting

+ Some options are unavailable depending on the piping specifications. Refer to “Combination of piping specifications with option 1 and part numbers of options”.

Refer to page 17 for details.

Descriptions

Output (OUT1) display (Orange)
Lights up when OUT1 is turned ON.

Output (OUT2) display (Orange)
Lights up when OUT2 is turned ON.

△ button
Use this button to select the mode or increase the ON/OFF set-value. It is also used for switching to the peak display mode.

LCD
Displays the current pressure, set mode, selected display unit, and error code. Always use red or green display; or switch between green and red according to the output. Four different display settings are available.

SET button
Use this button to change the mode or confirm the set-value.

▽ button
Use this button to select the mode or decrease the ON/OFF set-value. It is also used for switching to the bottom display mode.

Panel fitting dimensions

Note) This is the minimum value for the piping method 01 or N01.
Take the piping material and tubing into account for design. When the corner is to have radius, it must be R3 or less.
**A. Copy function (F97)**

The settings of the master pressure switch can be copied to the slave pressure switches. This can reduce the labor for setting and prevent the entry of incorrect set-values. **The set-value can be copied to up to 10 switches simultaneously. (Maximum communication distance 4 m)**

1. Wire as shown in the left figure.
2. Select the slave switch which is to be the master, and change it into a master using the buttons. (In the default setting, all switches are set as slaves.)
3. Press the button of the master switch to start copying.

**B. Auto-preset function (F 4)**

Auto-preset function, when selected in the initial setting, calculates and stores the set-value from the measured pressure. The optimum set-value is determined automatically by repeating vacuum and break with the target work piece several times.

**Suction Verification**

<table>

<td></td>
</tr>
</tbody>
</table>

**C. Display calibration function (F 6)**

Fine adjustment of the indicated value of the pressure sensor can be made within the range of ±5% of the read value. (The scattering of the indicated value can be eliminated.)

**D. Peak and bottom display function**

This function constantly detects and updates the maximum (minimum) value and allows to hold the maximum (minimum) pressure value.

When the buttons are simultaneously pressed for 1 second or longer, while "holding", the hold value will be reset.

**E. Key lock function**

This function prevents incorrect operations such as accidentally changing the set-value.

**F. Zero-clear function**

This function clears and resets the zero value on the display of measured pressure. For the pressure switch with analog output, the analog output shifts according to the indication. The indicated value can be adjusted within ±7% F.S. of the pressure when ex-factory. (ZSE40AF (for compound pressure) ±3.5% F.S.)
G Error indication function

<tr>
<td></td>
<td>(Er 9)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

If the above remedy cannot recover the operation, ask SMC for repair.

H Anti-chattering function (F 3)

A large bore cylinder or ejector consumes a large volume of air in operation and may experience a temporary drop in the supply pressure. This function prevents detection of such temporary drops in the supply pressure as an error.

**<Principle>**

This function averages pressure values measured during the response time set by the user and then compares the average pressure value with the pressure set point value to output the result on the switch.

![Diagram showing anti-chattering function](image)

- **Available response time settings**
  - 20 ms, 100 ms, 500 ms, 1000 ms, 2000 ms

I Display unit switching function (F 0)

Display units can be switched with this function.

<table>

<td></td>
</tr>
</tbody>
</table>

* The ZSE40A (vacuum pressure) and ZSE40AF (compound pressure) will have different setting and display resolution when the unit is set to MPa.

The \(F\) in ( ) shows the function code number. Refer to the Operation Manual for the details of operation procedures and function codes.
**J** Power-saving mode (F80)
Power-saving mode can be selected. It shifts to the power-saving mode without button operation for 30 seconds. It is set to the normal mode (Power-saving mode is OFF.) when ex-factory. (Decimal points and operation indicator light (only when the switch output is turned ON.) blink in the power-saving mode.)

**K** Secret code setting (F81)
It can be set whether secret code input is required or not when key is locked. It is set to input no secret code when ex-factory.

**L** Auto-shift function (F 5)
When there are large fluctuations in the supply pressure, the switch may fail to operate correctly. The auto-shift function compensates such supply pressure fluctuations. It measures the pressure at the time of auto-shift signal input and uses it as the reference pressure to correct the set-value on the switch.

**Set-value correction by auto-shift function**

![Diagram showing the auto-shift function](image)

- Rectified value
  When the auto-shift is selected, "     " will be displayed for about 1 second, and the pressure value at that point will be saved as a rectified value "      " based on the saved rectified values, the set-values of "      " will likewise be rectified.
  
  *Note) When an output is reversed, "      " will be rectified.

<table>
<thead>
<tr>
<th>Possible Set Range for Auto-Shift Input</th>
<th>Regulating pressure range</th>
<th>Possible set range</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

**Auto-shift zero**
The basic function of auto-shift zero is the same as the function for auto-shift. Also, it corrects values on the display, based on a pressure value of "      " when the auto-shift is selected.

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC), American National Standards Institute (ANSI)\(^1\) and other safety regulations.

\(^1\) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
ISO 10218-1: Manipulating industrial robots - Safety.
ANSI / (NFPA) T2.25.1 R2: Pneumatic fluid power - Systems standard for industrial machinery.
NFPA (Fluid) T2.24.1 R1: Hydraulic fluid power - Systems standard for stationary industrial machinery.
NFPA 79: Electrical Standard for Industrial Machinery.

\[\text{Caution:}\]
Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

\[\text{Warning:}\]
Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

\[\text{Danger :}\]
Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

### 1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

### 2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

### 3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

### 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.
Safety Instructions

⚠️ Caution

1. The product is provided for use in manufacturing industries.
   
   The product herein described is basically provided for peaceful use in manufacturing industries.
   
   If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
   
   If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered.¹²)
   
   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
   
   This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

   ¹²) Vacuum pads are excluded from this 1 year warranty.
   
   A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
   
   Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.

2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.
**Series ZSE40A(F)/ISE40A**

*Specific Product Precautions 1*

Be sure to read before handling. Refer to back pages 1 and 2 for Safety Instructions, “Handling Precautions for SMC Products” (M-E03-3) for Pressure Switches Precautions.

---

### Handling

⚠️ **Caution**

1. Do not drop, bump, or apply excessive impacts (100 m/s²) while handling. Although the body of the sensor may not be damaged, the internal parts of the sensor could be damaged and lead to a malfunction.

2. The tensile strength of the cord is 49 N. Applying a greater pulling force on it can cause a malfunction. When handling, hold the body of the sensor—do not dangle it from the cord.

3. Do not exceed the screw-in torque of 7 to 9 N·m when connecting the pipe to the switch. Exceeding this torque may cause the switch to malfunction.

4. Do not use pressure sensors with corrosive and/or flammable gases or liquids.

---

### Operating Environment

⚠️ **Caution**

1. Do not use the product in a place where it could be splashed by oils or solvents.

2. When this pressure switch is used in a place where water and dust splash on, water and dust may enter inside the switch through the atmospheric vent port. Insert a ø4 tube (I.D. ø2.5) into the atmospheric vent port, and bring piping of the opposite side up to the safe position to keep it from water and dust. Do not bend the tube or close the hole of it. It causes malfunction with the measurement of positive pressure.

3. Take measures against static electricity with equipment when this switch is used in connection with resin piping. Also, the ground should be separate from that of the units that generate strong electromagnetic noise or high frequency, otherwise, the switch can be damaged by static electricity.

---

### Connection

⚠️ **Caution**

1. Incorrect wiring can damage the switch and cause a malfunction or erroneous switch output.

2. Connections should be done while the power is turned off.

3. Wire separately from power lines and high voltage lines, avoiding wiring in the same conduit with these lines. Malfunctions may occur due to noise from these other lines.

4. If a commercial switching regulator is used, make sure that the F.G. terminal is grounded.

---

### Operating Environment

**Warning**

1. This pressure switch is CE marked; however, it is not equipped with surge protection against lightning. Lightning surge countermeasures should be applied directly to system components as necessary.

2. This pressure switch does not have an explosion proof rating. Never use in the presence of an explosive gas as this may cause a serious explosion.
Mounting

**Caution**

1. Mounting with panel mount adapter

   Mount a bracket to the using two mounting screws and install on piping. The switch can be installed horizontally depending on the installation location.

   !! Caution !!
   Mounting
   The tightening torque for bracket mounting screw should be 0.5 to 0.7 N·m for M3 and 1.4 to 1.6 N·m for M4.

2. Mounting with bracket

   Set the pressure within the rated pressure range.
   The set pressure range is the range of pressure that is possible in setting.
   The rated pressure range is the range of pressure that satisfies the specifications (accuracy, linearity, etc.) on the switch.
   Although it is possible to set a value outside the rated pressure range, the specifications will not be guaranteed even if the value stays within the set pressure range.

**Features**
- Suitable for a wide variety of fluids with stainless diaphragm
- IP65
- RoHS compliant
- Low leakage. VCR®, Swagelok® compatible fittings can be selected.
- With one-touch fittings (Straight, Elbow)
- Back piping, underside piping
