Flow Sensor
Series PFMV

Suction check of very small workpieces
This flow sensor enables precise suction.

- Repeatability: ±2% F.S. or less
  The taper-shaped flow passage in front of the sensor chip enables stable sensing.
- Response speed: 5 ms or less
- Proof pressure: 500 kPa
- Grease-free
- RoHS compliant
- Flexible cable

(Comparison under Nozzle diameter: Ø0.3, Vacuum pressure: −60 kPa)
Sensor

Reduced piping space
Mountable in a space-saving location since the straight piping length is not required.

65 mm

Actual size

= When using one-touch fitting, KJL04-M5

34.4 mm

10 mm

Mass: 10 g

Flexible cable

Series PFMV5

Voltage Monitor

A full range of sensors (6 ranges) can be covered by one monitor.
No need to select the range of connected sensors (excluding external input).

• Voltage display
Output voltage of the sensor is displayed.
  • Settable range: 0.7 to 5.10 V
  • Minimum unit setting: 0.01 V

Series PFMV3

• Connectors
Easy connection and removal of wiring

Power supply

Applications

• Suction check of very small workpieces
  • Suction of small components can be checked.
  • Highly applicable to small nozzles
  • Detects nozzle clogging and crushing.

• Easier leakage test
  • Easily detects pin holes on molded parts.

• Easier check of the workpiece presence
  • Workpiece presence is easily checked by flow-rate change.

• Sensors can be mounted as a manifold.
• Sensors can be mounted near pads.
Mountings

- Direct mount
- Manifold mount
- One-side bracket mount
- Both-side bracket mount

- Panel mount
- Bracket mount

Support for vertical and horizontal secure mounting
- A single panel opening is sufficient.
- Reduces panel fitting work and enables space-savings.

**Example (Vacuum)**

Selecting conditions:
- Nozzle diameter: ø0.3
- P1: 0 [kPa]
- P2: -60 [kPa]

The flow rate will be 0.7 to 0.8 [l/min] based on the graph.

Select the PFMV510-1.

**Example (Positive pressure)**

Selecting conditions:
- Nozzle diameter: ø0.3
- P1: 0 [kPa]
- P2: 20 [kPa]

The flow rate will be 0.7 to 0.8 [l/min] based on the graph.

Select the PFMV510-1.

**Note**

Since the calculated value may not meet the approximate value due to leakage and pressure loss in the piping system, please check the result by using actual equipment.
## Flow Sensor

### Series PFMV5

#### How to Order

**PFMV5 05 - 1 -**

**Measurement flow range**

- **05**: 0.0 to 0.5 l/min
- **10**: 0.0 to 1.0 l/min
- **30**: 0.0 to 3.0 l/min
- **05F**: -0.5 to 0.5 l/min
- **10F**: -1.0 to 1.0 l/min
- **30F**: -3.0 to 3.0 l/min

**Output specification**

- **1**: Analog output (1 to 5 V)

**Option (shipped together)**

- **A**: With L-type bracket

**Mounting screw**

- 2 L-type brackets (with 2 mounting screws) are included.

**Instruction manual**

- **Nil**: None
- **N**: With instruction manual (Leaflet: Japanese and English)

### Option/Part No.

If a single option or manifold mounting are required, order sensors with the part numbers below separately.

Detection Principle

This MEMS sensor chip consists of upstream temperature measuring sensor (Ru) and downstream temperature measuring sensor (Rd), which are placed symmetrically from the center of a platinum thin film coated heater (Rh) mounted on a membrane, and an ambient temperature sensor (Ra) for measuring gas temperature.

The principle is as shown in the diagram on the right. (a) When the gas is static, the temperature distribution of heated gas centered around Rh is uniform, and Ru and Rd have the same resistance. (b) When the gas flows from the left side, it upsets the balance of the temperature distribution of heated gas, and the resistance of Rd becomes greater than that of Ru. The difference in resistance between Ru and Rd is proportional to the gas velocity, so measurement and analysis of the resistance can show the flow direction and velocity of the gas. Ra is used to compensate the gas and/or ambient temperature.

![Analog output [V]](image)

4 to 20 mA DC

![Analog output [mA]](image)
Series PFMV3

Internal Circuits

**PFMV300**
- NPN open collector output: 2 outputs
- Max. 30 V, 80 mA, residual voltage 1 V or less
- Analog output: 1 to 5 V
- Output impedance: Approx. 1 kΩ

**PFMV303**
- PNP open collector output: 2 outputs
- Max. 80 mA, residual voltage 1 V or less
- Analog output: 1 to 5 V
- Output impedance: Approx. 1 kΩ

**PFMV301**
- NPN open collector output: 2 outputs
- Max. 30 V, 80 mA, residual voltage 1 V or less
- Analog output: 4 to 20 mA
- Max. load impedance: 300 Ω (at 12 VDC) 600 Ω (at 24 VDC)
- Min. load impedance: 50 Ω

**PFMV304**
- PNP open collector output: 2 outputs
- Max. 80 mA, residual voltage 1 V or less
- Analog output: 4 to 20 mA
- Max. load impedance: 300 Ω (at 12 VDC) 600 Ω (at 24 VDC)
- Min. load impedance: 50 Ω

**PFMV302**
- NPN open collector output with auto-shift input: 2 outputs
- Max. 30 V, 80 mA, residual voltage 1 V or less

**PFMV305**
- PNP open collector output with auto-shift input: 2 outputs
- Max. 80 mA, residual voltage 1 V or less
**LCD Display**
Shows the current voltage, mode setting, and error code. Four display modes are available, some of which use indications that are fixed either red or green, and others use indications that change from green to red.

**Output (OUT1) Indicator (Green)**
Lights when the output (OUT1) is turned on.

**Triangle Button**
Used for mode selection and increasing the ON/OFF setting value. Also used to switch to peak display mode.

**Output (OUT2) Indicator (Red)**
Lights when the output (OUT2) is turned on.

**SET Button**
Used to activate mode changes and new setting values.

**V Button**
Used for mode selection and decreasing the ON/OFF setting value. Also used to switch to bottom display mode.

Function Details

**Output operation**
The output operation can be selected from the following:
Output (hysteresis mode and window comparator mode) corresponding to receiving voltage
At the time of shipment from the factory, it is set to hysteresis mode and reverse output.

**Displayed values**
The monitor receives the output voltage of the connected sensor and displays the received voltage. The unit is [V] and the voltage is displayed at 0.01 V intervals. However, the voltage under 0.70 V is displayed as "LLL" and that of 5.1 V or more is displayed as "HHH".
Since the voltage is displayed on the monitor, it doesn’t rely on the sensor range.

**Indication color**
The indication color can be selected for each output condition. The selection of the indication color provides visual identification of abnormal values. (The indication color depends on OUT1 setting.)

**Setting of response time**
The flow rate may change momentarily during transition between ON (open) and OFF (closed) of the valve. It can be set so that this momentary change is not detected.

**Auto-shift function**
If the supply pressure of the air source fluctuates, the flow rate of vacuum generators such as an ejector also fluctuates. In that case, the switch may not operate properly when checking absorption. Auto-shift is a function that corrects this fluctuation. This function sends the output corresponding to the relative change based on the flow rate when the auto-shift signal is input. Set value = -0.50: The switch turns ON and OFF when the set value decreases by 0.5 V from the reference value.
Set value = 0.50: The switch turns ON and OFF when the set value increases by 0.5 V from the reference value.
The reference value shows the voltage (= flow rate) when the auto-shift signal is input.

**Peak/Bottom value indication**
The maximum (minimum) voltage is detected and updated from when the power supply is turned on. In peak (bottom) value indication mode, this maximum (minimum) voltage is displayed.

**Setting of secret code**
The user can select whether a secret code must be entered to release key lock. At the time of shipment from the factory, it is set such that the secret code is not required.

**Keylock function**
Prevents operation errors such as accidentally changing setting values.

**Error indication function**
When an error or abnormality arises, the location and contents are displayed.

### Description
- **Input voltage error**: The voltage outside the applicable indication range is input.
- **System error**: System error. Possibility of data memorizing failure or internal circuit damage.

### Contents
- **Action**
  - Check the input voltage.
  - Stop operation immediately and contact SMC.
  - Reset the unit, and carry out all settings again.

### Action
- If the error or abnormality cannot be solved by the action above, please contact SMC for further investigation.

**Reference value correcting function**
If the displayed value doesn’t become 1.00 due to the difference of the analog output of the connected sensors PFMV505, 510 and 530, the reference value will compulsively be set to 1.00. When sensors PFMV505F, 510F and 530F are connected, the reference value will compulsively be set to 3.00.
When the PFMV505 is used and the flow rate is applied, please pay attention to the following point. If this correcting function is applied around 3.00 V, the reference value will be changed and the function won’t work properly. If the monitor is improperly operated, return the flow rate to zero and operate the monitor again.
### Series PFMV5

#### Specific Product Precautions

Be sure to read before handling. Refer to front matters 58 and 59 for Safety Instructions and pages 892 to 896 for Flow Switch Precautions.

---

### Design and Selection

**Warning**

1. **Operate the sensor only within the specified voltage.**
   
   Use of the sensor outside of the specified voltage range can cause not only a malfunction and damage to the sensor, but it can also cause electrocution and fire.

2. **Be sure to verify the applicable fluid.**
   
   The sensors do not have an explosion proof rating. To prevent possible fire hazard, do not use with flammable gases.

3. **Use the sensor within the specified flow rate measurement and operating pressure.**
   
   Operating beyond the specified flow rate and operating pressure can damage the sensor.

4. **Never use flammable fluids and/or permeable fluids.**
   
   They may cause a fire, an explosion or corrosion.
   
   * Refer to the MSDS (Material Safety Data Sheet) when using chemicals.

5. **Be sure to use the sensor within the specified ambient and fluid temperatures.**
   
   If the ambient or fluid temperatures exceed the specified range, it may damage the sensor.
   
   Even if they are in the specified range, do not use it in a place where condensation occurs in the piping.

6. **To prevent damage due to failure and/or malfunction of the product, establish a backup system such as a fail-safe system which enables multiple-stage type operation of the equipment and machinery.**

7. **When the product is for an interlock circuit, the following points should be noted.**
   
   - Provide double interlocking through another system (mechanical protection function, etc.).
   - Perform checks to ensure the product is operating properly, as there is a risk of injury.

**Caution**

1. **Ensure sufficient space for maintenance activities.**
   
   Provide space required for maintenance.

2. **The direct-current power supply to combine should be UL authorized power supply.**

   (1) Limited voltage current circuit in accordance with UL 508.
   
   A circuit in which power is supplied by the secondary coil of a transformer that meets the following conditions.
   
   - Maximum voltage (with no load): 30 Vrms (42.4 V peak) or less
   - Maximum current:
     
     (1) 8 A or less (including when short circuited)
     (2) limited by circuit protector (such as fuse) with the following ratings.

   No load voltage (V peak) | Max. current rating
   ------------------------|---------------------
   0 to 20 [V] | 5.0
   20 to 30 [V] | 100
   Above 20 to 30 [V] | Peak voltage

   (2) A circuit using max. 30 Vrms or less (42.4 V peak), which is powered by UL1310 or UL1585 compatible Class-2 power supply.

---

### Mounting

**Caution**

1. **Monitor the flow direction of the fluid.**
   
   Install and connect piping so that fluid flows in the direction of the arrow indicated on the body.

2. **Remove dirt and dust from inside of the piping before attaching to the sensor.**

3. **Observe the proper tightening torque.**
   
   When the sensor is tightened beyond the specified tightening torque, the sensor may be damaged.
   
   - Tightening torque for mounting part (Direct mount, Bracket mount): 0.32 ± 0.02 N·m
   - Tightening torque for fitting part: 1 to 1.5 N·m

4. **Do not mount the sensor in a place that will be used as a scaffold.**
   
   The sensor could break if subjected to excessive load such as being accidentally stepped on.

5. **Do not drop or bump.**
   
   Do not drop, bump, or apply excessive impacts while handling. Although the external body of a sensor (sensor case) may not be damaged, the sensor inside could be damaged and cause a malfunction.

6. **Hold the body of the sensor when handling.**
   
   The tensile strength of the cord is 49 N and applying a greater pulling force than this can cause a malfunction. When handling, hold the body of the sensor.

7. **Do not use until you can verify that equipment can operate properly.**
   
   Following mounting, repair, or retrofit, verify correct mounting by conducting suitable function and leakage tests after piping and power connections have been made.
Warning

1. Never use in the presence of explosive gases.
   The sensor does not have an explosion proof construction. If it is used in an environment where explosive gases are used, it may cause an explosive disaster. Therefore, never use it in such an environment.

2. Mount the sensor in a location where there is no vibration or no impact.
   The sensor output may change because the sensor and connecting piping move.

3. Fix the sensor and connecting piping.
   The sensor output may change because the sensor and connecting piping move.

4. Do not use in an area where surges are generated.
   When there are units that generate a large amount of surge in the area around a sensor, (e.g., solenoid type lifters, high frequency induction furnaces, motors, etc.) this may cause deterioration or damage to the sensor's internal circuitry. Avoid sources of surge generation and crossed lines.

5. Sensors are not equipped with surge protection against lightning.
   The flow sensors are CE compliant; however, they are not equipped with surge protection against lightning. Lightning surge protection measures should be applied directly to system components as necessary.

6. Avoid using the sensor in an environment where the likelihood of splashing or spraying of liquids exists.
   The sensor is an open type and should not be used in an environment exposed to splashing of water and oil.

7. Do not use the product in an environment subject to a temperature cycle.
   If the product is subject to a temperature cycle other than natural changes in air temperature, the internal components of the sensor could be adversely affected.

8. Do not mount the product in locations where it is exposed to radiant heat.
   This could result in damage and/or malfunction.

Warning

1. Never use in the presence of explosive gases.
   The sensor does not have an explosion proof construction. If it is used in an environment where explosive gases are used, it may cause an explosive disaster. Therefore, never use it in such an environment.

2. Mount the sensor in a location where there is no vibration or no impact.
   The sensor output may change because the sensor and connecting piping move.

3. Fix the sensor and connecting piping.
   The sensor output may change because the sensor and connecting piping move.

4. Do not use in an area where surges are generated.
   When there are units that generate a large amount of surge in the area around a sensor, (e.g., solenoid type lifters, high frequency induction furnaces, motors, etc.) this may cause deterioration or damage to the sensor's internal circuitry. Avoid sources of surge generation and crossed lines.

5. Sensors are not equipped with surge protection against lightning.
   The flow sensors are CE compliant; however, they are not equipped with surge protection against lightning. Lightning surge protection measures should be applied directly to system components as necessary.

6. Avoid using the sensor in an environment where the likelihood of splashing or spraying of liquids exists.
   The sensor is an open type and should not be used in an environment exposed to splashing of water and oil.

7. Do not use the product in an environment subject to a temperature cycle.
   If the product is subject to a temperature cycle other than natural changes in air temperature, the internal components of the sensor could be adversely affected.

8. Do not mount the product in locations where it is exposed to radiant heat.
   This could result in damage and/or malfunction.
Series PFMV5
Specific Product Precautions 3

Be sure to read before handling.
Refer to front matters 58 and 59 for Safety Instructions and pages 892 to 896 for Flow Switch Precautions.

Warning

1. Perform periodical inspections to ensure proper operation of the sensor.
   Unexpected malfunctions may cause possible danger.

2. Take precautions when using the sensor for an interlock circuit.
   When a sensor is used for the interlock circuit, devise a multiple interlock system to prevent trouble or malfunction, and verify the operation of the sensor and interlock function on a regular basis.

3. Do not make any modifications (including exchanging the printed circuit boards) to the product.
   It may cause human injuries and damage.

4. When maintenance work is performed, the following points should be noted.
   • Turn off the power supply.
   • Cut off the fluid supply, drain the fluid from the piping and ensure the fluid is released to atmosphere before carrying out maintenance. Otherwise, it could cause injury.

Caution

1. Do not wipe the product with chemicals such as benzene or thinner.
   Such chemicals could damage the product.

2. Do not poke the inside of the piping port with a stick.
   The rectifier could break, making the product unable to sustain the desired performance.

3. Do not touch terminals when energizing the product.
   It could cause electric shock, malfunction, or damage to the sensor.

Fluid

Warning

1. Check regulators and flow adjustment valves before introducing the fluid.
   If pressure or flow rate beyond the specified range are applied to the sensor, the sensor unit may be damaged.

2. Install a filter on the inlet side when there is a possibility of foreign matter being mixed with the fluid.

3. Use dry air of quality compliant with JIS B 8392-1 1.1.2 to 1.6.2: 2003, ISO8573-1 1.1.2 to 1.6.2: 2001 for this product.
   If any mist or drainage present in the air attaches to the product, the sensor could be damaged or accurate measurement could be prevented.
## Caution

Set the flow rate within the rated flow range.

The rated flow range is the range that satisfies the sensor specifications.

Design and Selection

**Warning**

1. Operate the switch only within the specified voltage.
   Use of the switch outside of the specified voltage range can cause not only a malfunction and damage to the switch, but it can also cause electrocution and fire.

2. Do not exceed the maximum allowable load specification.
   A load exceeding the maximum load specification can cause damage to the switch.

3. Do not use a load that generates surge voltage.
   Although surge protection is installed in the circuit at the output side of the switch, damage may still occur if a surge is applied repeatedly. When working directly such an unit as relay, solenoid valve, etc., which generates surge, use a built-in surge absorbing element type.

4. Monitor the internal voltage drop of a switch.
   When operating below the specified voltage, it is possible that a load may be ineffective, even though the pressure switch function is normal. Therefore, the formula below should be satisfied after confirming the voltage of the load.

   \[
   \text{Supply voltage} - \text{Internal voltage drop of switch} > \text{Minimum operating voltage of load}
   \]

5. To prevent damage due to failure and/or malfunction of the product, establish a backup system such as a fail-safe system which enables multiple-stage type operation of the equipment and machinery.

6. When the product is for an interlock circuit, the following points should be noted.
   - Provide double interlocking through another system (mechanical protection function, etc.).
   - Perform checks to ensure the product is operating properly, as there is a risk of injury.

**Caution**

1. Ensure sufficient space for maintenance activities.
   Provide space required for maintenance.

2. The direct-current power supply to combine should be UL authorized power supply.
   (1) Limited voltage current circuit in accordance with UL 508.
   A circuit in which power is supplied by the secondary coil of a transformer that meets the following conditions.
   - Maximum voltage (with no load): 30 Vrms (42.4 V peak) or less
   - Maximum current: (1) 8 A or less (including when short circuited)
     (2) limited by circuit protector (such as fuse) with the following ratings.

<table>
<thead>
<tr>
<th>No load voltage (V peak)</th>

</tr>
</thead>
<tbody>
<tr>
<td>0 to 20 [V]</td>
<td>5.0</td>
</tr>
<tr>
<td>Above 20 to 30 [V]</td>
<td>100</td>
</tr>
</tbody>
</table>

(2) A circuit using max. 30 Vrms or less (42.4 V peak), which is powered by UL1310 compatible Class-2 power supply or UL 1585 compatible Class-2 transformer (Class-2 circuit).

**Warning**

1. Do not drop or bump.
   Do not drop, bump, or apply excessive impacts (490 m/s²) while handling. Although the external body of a switch (switch case) may not be damaged, the switch inside could be damaged and cause a malfunction.

2. Do not use until you can verify that equipment can operate properly.
   Following mounting, repair, or retrofit, verify correct mounting by conducting suitable function and leakage tests after piping and power connections have been made.

3. Never mount the switch in a place that will be used as a scaffold during piping.

**Warning**

1. Do not mount the switch in a place that will be used as a scaffold.
   The switch could break if subjected to excessive load such as being accidentally stepped on.

**Caution**

1. Do not mount the switch in a place that will be used as a scaffold.
   The switch could break if subjected to excessive load such as being accidentally stepped on.

**Wiring**

**Warning**

1. Verify the color and the terminal number when wiring.
   Incorrect wiring can cause the switch to be damaged and malfunction. Verify the color and the terminal number in the instruction manual when wiring.

2. Use caution not to repeatedly apply bending or stretching forces to the lead wire.
   Repeated pulling or bending of the lead wire may cause some of the wires to break.

3. Confirm proper insulation of wiring.
   Make sure that there is no faulty wiring insulation (contact with other circuits, ground fault, improper insulation between terminals, etc.). Damage may occur due to excess current flow into a switch.

4. Do not wire in conjunction with power lines or high voltage lines.
   Wire separately from power lines and high voltage lines, and avoid wiring in the same conduit with these lines. Control circuits, including switches, may malfunction due to noise from these lines.
Operating Environment

⚠️ Warning

5. Do not short-circuit a load.
   Although the switch displays an overcurrent error if a load is short-circuited, there is no protection against incorrect wiring (power source polarity, etc.). Use caution to avoid wiring incorrectly.

6. Do not connect wiring while energizing the product.
   The switch and any equipment connected to it could break and malfunction.

⚠️ Operating Environment

1. Never use in the presence of explosive gases.
   The switch does not have an explosion proof construction. If it is used in an environment where explosive gases are used, it may cause an explosive disaster. Therefore, never use it in such an environment.

2. Mount the switch in a location where there is no vibration greater than 98 m/s², or no impact greater than 490 m/s².

3. Do not use in an area where surges are generated.
   When there are units that generate a large amount of surge in the area around a pressure switch, (e.g., solenoid type lifters, high frequency induction furnaces, motors, etc.) this may cause deterioration or damage to the switch's internal circuitry. Avoid sources of surge generation and crossed lines.

4. Switches are not equipped with surge protection against lightning.
   The flow switches are CE compliant; however, they are not equipped with surge protection against lightning. Lightning surge protection measures should be applied directly to system components as necessary.

5. Avoid using the switch in an environment where the likelihood of splashing or spraying of liquids exists.
   The switch is an open type and should not be used in an environment exposed to splashing of water and oil.

6. Do not use the product in an environment subject to a temperature cycle.
   If the product is subject to a temperature cycle other than natural changes in air temperature, the internal components of the switch could be adversely affected.

7. Do not mount the product in locations where it is exposed to radiant heat.
   This could result in damage and/or malfunction.

⚠️ Wiring

1. Do not short-circuit a load.
   Although the switch displays an overcurrent error if a load is short-circuited, there is no protection against incorrect wiring (power source polarity, etc.). Use caution to avoid wiring incorrectly.

2. Do not connect wiring while energizing the product.
   The switch and any equipment connected to it could break and malfunction.

⚠️ Maintenance

1. Perform periodical inspections to ensure proper operation of the switch.
   Unexpected malfunctions may cause possible danger.

2. Take precautions when using the switch for an interlock circuit.
   When a pressure switch is used for the interlock circuit, devise a multiple interlock system to prevent trouble or malfunction, and verify the operation of the switch and interlock function on a regular basis.

3. Do not make any modifications (including exchanging the printed circuit boards) to the product.
   It may cause human injuries and damage.

4. When maintenance work is performed, the following points should be noted.
   - Turn off the power supply.

⚠️ Caution

1. Do not wipe the product with chemicals such as benzene or thinner.
   Such chemicals could damage the product.

2. Do not touch terminals or connectors when energizing the product.
   It could cause electric shock, malfunction, or damage to the switch.

⚠️ Others

1. After the power is turned on, the switch's output remains off while a message is displayed. Therefore, start the measurement after a value is displayed.

2. Perform settings after stopping control systems.
   Operation reflects the new values when settings are made. However, if the power is turned OFF in that state, the settings return to the values before the change when the power is turned ON again. Make sure to press the S button to save any setting changes before turning OFF the power.

⚠️ Warning

1. Perform periodical inspections to ensure proper operation of the switch.
   Unexpected malfunctions may cause possible danger.

2. Take precautions when using the switch for an interlock circuit.
   When a pressure switch is used for the interlock circuit, devise a multiple interlock system to prevent trouble or malfunction, and verify the operation of the switch and interlock function on a regular basis.

3. Do not make any modifications (including exchanging the printed circuit boards) to the product.
   It may cause human injuries and damage.

4. When maintenance work is performed, the following points should be noted.
   - Turn off the power supply.
Settable Range and Voltage Input Range

⚠️ Caution

The settable rate range is the range that can be set in the switch. The inputtable range is the range that satisfies the switch specifications (accuracy, linearity, etc.). It is possible to set a value outside of the inputtable range if it is within the settable range, however, the specification is not guaranteed.
