- Inlet pressure: 0.15 MPa

---

* For the allowable voltage fluctuation for Z/T type (with power saving circuit), please observe the following range because they have voltage drop due to internal circuit.

Z type
- 24 VDC: –7% to +10%
- 12 VDC: –4% to +10%

T type
- 24 VDC: –6% to +10%
- 12 VDC: –6% to +10%

---

^Note 1^ Can be used with positive pressure to suit the application.

^Note 2^ Please use with pilot X port pressure equal to or higher than the release port 1(P) pressure.

^Note 3^ Impact resistance: No malfunction occurred when it is tested in the axial direction and at the right angles to the main valve and armature in both energized and de-energized states every once for each condition. (Values at the initial period)

Vibration resistance: No malfunction occurred in a one-sweep test between 45 and 2000 Hz. Test was performed at both energized and de-energized states in the axial direction and at the right angles to the main valve and armature. (Values at the initial period)

<Filter replacement instructions>

If there are situations such as filter clogging, a drop in suction force, or slow response time, stop operation and replace the filter.

1. Using a precision driver, remove the filter assembly (12 or 14) from the main unit.
2. Turn the filter guide by hand and remove.
3. Replace the filter (12 or 14) and gently hand tighten the filter guide. At this time, check that there is no foreign matter on the O-ring of the filter assembly.
4. Return the filter assembly to the main unit. (Tightening torque: 0.12 N·m)

Connector type

- Parallel wiring
- Serial wiring

Note: Refer to pages 10, 26, 34, and 42 for details.

Connector entry

- With parallel wiring specifications, it is necessary to select the connector entry direction (1: upward, 2: lateral). (Only upward is available for GD.) For details, refer to page 10.

How to Order Valve Manifold Assembly

Ordering example (SS3J3-V60PD2-[□])

Individual wiring/lead wire length 300 mm, with plug (24 VDC)

With switch, plug (24 VDC)

SS3J3-V60PD2-06D – 1 set (Manifold part no.)
- S3J3A6-5CZJ-P – 4 sets (Non-polar type, with plug part no.)
- S3J3A6-5CZJ-P – 1 set (With switch, plug part no.)
- S3J3A6-5MZ-P – 1 set (Individual wiring, lead wire length 300 mm, with plug part no.)

-The asterisk denotes the symbol for assembly.
- Prefix to the part no. of the solenoid valve, etc.

* The number of the blanking block assembly is also included. For the blanking block assembly, please select double wiring specifications.

- DIN rail length specified

<table>
<thead>
<tr>
<th>Nil</th>
<th>Standard length</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>3 stations</td>
</tr>
<tr>
<td>16</td>
<td>16 stations</td>
</tr>
</tbody>
</table>

- SUP/EXH block mounting position

| U | U side (2 to 10 stations) |
| D | D side (2 to 10 stations) |
| B | Both sides (2 to 16 stations) |

- Special specifications

- Specify the required specifications (including port sizes other than ø8) by means of the manifold specification sheet.

- SUP/EXH block fitting spec.

| Nil | Straight fitting |
| L   | (Upward)        |
| B   | (Downward)      |

* There is no need to enter anything when the SUP/EXH block mounting position “M” is selected. Also, this manifold comes standard with external pilot specifications.

- Valve stations

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Stations</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
</tr>
<tr>
<td>PH:</td>
<td></td>
</tr>
<tr>
<td>S6B:</td>
<td></td>
</tr>
</tbody>
</table>

- There are limitations on the station number, depending on the serial type. Refer to page 34 for details.

- Series SJ3A6 Vacuum Release Valve with Restrictor

Plug-in Connector Type
How to Order Solenoid Valves (3 Position 3 Port with Restrictor)

Standard

With switch

Individual wiring (For plug-in mixed mounting)

<table>
<thead>
<tr>
<th>Connector entry</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td>Dedicated for centralized wiring</td>
</tr>
<tr>
<td>M</td>
<td>Individual wiring, With lead wire Length 300 mm</td>
</tr>
<tr>
<td>MN</td>
<td>Individual wiring, Without lead wire (With connector, socket)</td>
</tr>
<tr>
<td>MO</td>
<td>Individual wiring, Without connector</td>
</tr>
</tbody>
</table>

Coil spec.

<table>
<thead>
<tr>
<th>Nil</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>With power saving circuit (Continuous duty type)</td>
</tr>
</tbody>
</table>

* Be sure to select "with power saving circuit" when the solenoid valve will be energized continuously for long period.

Rated voltage

| 5 | 24 VDC |
| 6 | 12 VDC |

* Only 24 VDC is available for manifolds compatible with serial wiring and PC wiring.

Light/surge voltage suppressor

<table>
<thead>
<tr>
<th>U</th>
<th>With light/surge voltage suppressor (Non-polar type)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Z</td>
<td>With light/surge voltage suppressor (Polar type)</td>
</tr>
</tbody>
</table>

* When the types with power saving circuit, with switches, and/or individual wiring are used, the non-polar type cannot be selected.
* "Z" is +COM spec.

Needle operation

| Nil: Manual |
| D: Slotted locking type |

* Set operation torque to 0.3 N·m or less.

Manual override

| Nil: Non-locking push type |
| D: Push-turn locking slotted type |

With switch

Note) Refer to pages 74 and 75 for the dedicated non-plug-in individual wiring.

Set operation torque to 0.3 N·m or less.

Connector entries with the symbol "M/L" cannot use the switch signal from the common wiring on the manifold.

When ordering a connector assembly separately, refer to back page 8.

Note) There is no valve block switch for linking the neighboring valve, etc. to the 3 position 3 port solenoid valve with restrictor. Consult SMC if you wish to use the SJ2000/3000 valve with a valve block switch, or an end block or SUP/EXH block assembly.

Note 2) The electrical connection to the manifold will be +COM. spec. when light/surge voltage suppressor is "Z" (Polar type).

Note 3) There is no valve block switch for linking the neighboring valve, etc. to the 3 position 3 port solenoid valve with restrictor. Consult SMC if you wish to use the SJ2000/3000 valve with a valve block switch, or an end block or SUP/EXH block assembly.
Series SJ3A6

Dimensions

**SS3J3-V60**

- One-touch fitting
  - [3/5(E) vacuum pressure port]
  - Applicable tubing O.D.: ø8
  - P = 10
- M5 x 0.8
  - Vacuum pressure side
    - Filter body assembly
  - With plug
- Connector entry upward
- D side
  - Switch for locking a connector
  - With manual needle type
  - Manual override
    - (Locking type: Press, then rotate.)
    - 4(A) port side: Blue
    - 2(B) port side: Yellow
  - 40
- DIN rail holding screw
  - (Station n) - - - (Station 1)
  - Light/surge voltage suppressor
    - SOLa: Orange
    - SOLb: Green
  - Switch
    - (When equipped with switch)

**Dimensions**

Since DIN rail dimensions are the same as the SS3J3-60□ series, refer to the following pages.

For D-sub connector: Page 15, 16
For flat ribbon cable: Page 20, 21
For EX180 serial wiring: Page 38, 39
For EX510 serial wiring: Page 46, 47

**Applicable connector:**
- D-sub (JIS-X-5101, MIL-C-24308) equivalent
How to Order Valve Manifold Assembly

Ordering example (SS3J3-V60-\(□\))

With plug (24 VDC)

- SJ3A6N-SMZ-P (2 sets)

With plug (24 VDC)

- SJ3A6N-SMZ-DP (4 sets)

SUP/EXH block (D side mounting)

- The asterisk denotes the symbol for assembly.
- Prefix to the part no. of the solenoid valve, etc.

SS3J3-V60-06D 1 set (Manifold part no.)

- SJ3A6N-SMZ-DP 4 sets (With plug part no.)
- SJ3A6N-SMZ-P 2 sets (With plug part no.)

- The valve arrangement is numbered as the 1st station from D side.
- Indicate the valves to be attached below the manifold part number, in order starting from station 1 as shown in the drawing. In the case of complex arrangement, specify them in the manifold specification sheet.

Individual wiring manifold

SUP/EXH block fitting spec.

- Nil
- Straight fitting
- Elbow fitting (Upward)
- Elbow fitting (Downward)

* There is no need to enter anything when the SUP/EXH block mounting position "M" is selected. Also, this manifold comes standard with external pilot specifications.
How to Order Solenoid Valves (3 Position 3 Port with Restrictor)

**SJ3A6**

**Coil spec.**
- **Nil**: Standard
- **T**: With power saving circuit (Continuous duty type)

*Be sure to select “with power saving circuit” when the solenoid valve will be energized continuously for long period.

**Rated voltage**
- **5**: 24 VDC
- **6**: 12 VDC

**Connector entry**
- **M**: Individual wiring, With lead wire
  - Length 300 mm
  - With linkage printed circuit board
- **MN**: Individual wiring, Without lead wire
  - (With connector, socket)
  - With linkage printed circuit board
- **MO**: Individual wiring, Without connector
  - With linkage printed circuit board

* When ordering a connector assembly separately, refer to back page 8.

**With light/surge voltage suppressor**

**Note**
- The electrical connection will be +COM. spec.

**PS port for detection**
- **Nil**: M5 x 0.8

**Needle operation**
- **Nil**: Manual
- **D**: Slotted locking type
  - Set operation torque to 0.3 N·m or less.

**Manual override**
- **Nil**: Non-locking push type

**P**: With plug (M-5P)

* Be sure to select “with power saving circuit” when the solenoid valve will be energized continuously for long period.

Note 1) For the SJ3系列, valve block and manual switches are not available.
Note 2) The valves cannot be operated only with the SUP/EXH block assembly for different pressure, select in combination with the SUP/EXH block assembly for internal/external pilot.
Note 3) Refer to page 60 about the SUP/EXH block disk assembly and method of handling of parts at different pressure.
These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC), Japan Industrial Standards (JIS)∗1 and other safety regulations∗2).

∗1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
JIS B 8370: General rules for pneumatic equipment.
JIS B 8361: General rules for hydraulic equipment.
JIS B 9960-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
e etc.

∗2) Labor Safety and Sanitation Law, etc.

Caution: Operator error could result in injury or equipment damage.

Warning: Operator error could result in serious injury or loss of life.

Danger: In extreme conditions, there is a possibility of serious injury or loss of life.

### Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

   Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

   The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

   1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
   2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
   3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

   1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
   3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
   4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.
Safety Instructions

⚠️ Caution

The product is provided for use in manufacturing industries.
The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

Limited Warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited Warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

Limited Warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered.*3)
   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
   This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
* 3) Vacuum pads are excluded from this 1 year warranty.
   A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
   Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

When the product is exported, strictly follow the laws required by the Ministry of Economy, Trade and Industry (Foreign Exchange and Foreign Trade Control Law).
Series SJ2000/3000

Specific Product Precautions 1

Be sure to read this before handling. Please refer to “Precautions for Handling Pneumatic Devices” (M-03-E3A) for Safety Instructions and 3/4/5 Port Solenoid Valves Precautions.

Manual Override Switch Operation

⚠️ Warning
For manual override operation, move the manual override switch to a position where letters A and B can be seen. (Manual override switch release status (refer to the figure below)) Operation with the manual override switch in a locked status can cause damage to the manual override and air leakage, so be sure to release the manual override switch before use. After manual override operation, lock the manual switch for use (when the manual override of the push-turn locking slotted type is locked, a manual override switch cannot be locked).

![Manual override switch](image)

Manual override switch slide direction

- Manual override switch locked status
- Manual override switch unlocked status

Manual Override Operation

⚠️ Warning
When the manual override is operated, connected equipment will be actuated. Confirm safety before operating.

- Non-locking push type
  Press in the direction of the arrow.

- Push-turn locking slotted type
  While pressing, turn in the direction of the arrow (90° clockwise). If it is not turned, it can be used in the same way as the non-locking push type.

Valve with Switch

⚠️ Warning
When turning off the valve using the switch, move it to the position where the valve is locked. If the switch is at an improper position and is energized, equipment connected to the valve could be actuated.

Also, if the switch is turned OFF on the valve in the energized state, be careful because any actuators connected to a single solenoid, a dual 3 port valve or a 3 position valve will actuate.

![Valve with Switch](image)

Normal operation: The valve is switched according to electric signals from the connector on the manifold side.

The valve coil is kept in a deenergized state even when there is an electric signal from the connector on the manifold side.

![Electric circuit diagram](image)

Electric circuit diagram (with positive common and light/surge voltage suppressor)

Built-in Back Pressure Check Valve Type

⚠️ Caution
Valves with built-in back pressure check valve is to protect the back pressure inside a valve. For this reason, use caution the valves with external pilot specification cannot be pressurized from exhaust port [3/5(E)].

As compared with the types which do not integrate the back pressure check valve, C value of the flow characteristics goes down. For details, please contact SMC.

Exhaust Restriction

⚠️ Caution
Since the SJ series is a type in which the pilot valve exhaust joins the main valve exhaust inside the valve, use caution, so that the piping from the exhaust port is not restricted.
Series SJ2000/3000
Specific Product Precautions 2

Be sure to read this before handling. Please refer to “Precautions for Handling Pneumatic Devices” (M-03-E3A) for Safety Instructions and 3/4/5 Port Solenoid Valves Precautions.

When Using a 4 Port Valve as a 3 Port Valve

Caution

■ When using a 4 port valve as a 3 port valve

The SJ2000/3000 series can be used as normally closed (N.C.) or normally open (N.O.) 3 port valves by plugging one of the cylinder ports 4(A) or 2(B). However, exhaust ports should be left open. It is convenient when a double solenoid 3 port valve is required.

Continuous Duty

Caution

If a valve is energized continuously for a long time, the rise in temperature due to heat-up of the coil may cause a decline in solenoid valve performance, reduce service life, or have adverse effects on peripheral equipment. If a valve will be energized continuously, please be sure to use the “Continuous duty type” with a power saving circuit. In particular, there will be a large increase in temperature if 3 or more neighboring stations are simultaneously continuously energized for a long time, or if the A and B sides are simultaneously continuously energized for a long time in a dual 3 port valve. Please be very careful in such cases.

With power saving circuit

Compared to the standard products, power consumption is reduced down to approx. 1/3 (in case of SJ360T) by cutting the unnecessary wattage required to hold the valve in an energized state. (Effective energizing time is over 67 ms at 24 VDC.)

Electric circuit diagram (with power saving circuit)

In case of single solenoid

1: Inrush current, 2: Holding current

Polarity protection diode

Not included with 12 VDC specifications.
Working Principle
With the circuit of back page 4, the current consumption, when holding, is reduced to save energy. Please refer to the electric wave data below.

In case of SJ3/L50132, electric waveform of energy saving type

<table>
<thead>
<tr>
<th>Applied voltage</th>

</tr>
<tr>
<td>0 W</td>
<td></td>
</tr>
</tbody>
</table>

- When a power saving circuit is installed, a diode to prevent reverse current is not available for 12 V DC spec. Therefore, use caution not to connect in reverse.
- Be careful about the allowable voltage fluctuation since a voltage drop of about 0.5 V occurs due to a transistor. (Refer to the solenoid specifications of each valve for details.)

Measures to prevent detours of surge voltage
When the DC power supply is shut off, by the emergency breaking circuit for example, valve misoperation may occur due to surge voltage produced by other electrical parts (such as electromagnetic coils). Please take measures to prevent surges from detouring to the valve (surge protection diode etc.), or use a valve with diode to prevent reverse current (polar: Z type). However, surge countermeasures are provided on the serial unit side of the serial type.

Circuit example

<table>
<thead>
<tr>
<th>① Valve</th>

<td></td>
</tr>
</tbody>
</table>

①, ③: Examples of surge voltage countermeasures
②: Valve with diode to prevent reverse current

Light Indication
When equipped with light/surge voltage suppressor, the light window turns orange when solenoid A is energized, and it turns green when solenoid B is energized.

Changing the Connector Entry Direction

Caution
To change the connector’s entry direction, set the switch on the top of the connector block to the FREE position, before turning the connector. Make sure to set the switch back to the LOCK position before connecting the connector. (When the switch is difficult to slide, move the connector a little so that it will slide easier.)

If an excessive force is applied on the connector in the LOCK position, the connector block may be damaged. Also, using in such a way that the connector floats in the FREE position, it may cause the lead wire, etc. to break. Thus, refrain from using in these ways.

Manifold Mounting
When attaching a manifold to a mounting surface, etc., with bolts, if the entire bottom surface of the DIN rail contacts the mounting surface in a horizontal mounting, it can be used by simply securing both ends of the DIN rail. However, for any other mounting method or for side facing and rear facing, etc., secure the DIN rail with bolts at uniform intervals using the following as a guide: 2 to 5 stations at 2 locations, 6 to 10 stations at 3 locations, 11 to 15 stations at 4 locations, 16 to 20 stations at 5 locations, 21 to 25 stations at 6 locations, 26 to 30 stations at 7 locations and more than 30 stations at 8 locations.

In addition, even in the case of a horizontal mounting, if the mounting surface is subject to vibration, etc., take the same measures indicated above. If secured at fewer than the specified number of locations, warping or twisting may occur in the DIN rail and manifold, causing trouble such as air leakage.
Caution

By replacing a valve’s fitting assembly, it is possible to change the port size of the 4(A), 2(B), 1(P), and 3/5(E) ports. When replacing it, pull out the fitting assembly after removing the clip with a flat head screwdriver, etc. To mount a new fitting assembly, insert it into place and then fully reinsert the clip.

Fitting Assembly Replacement

By replacing a valve’s fitting assembly, it is possible to change the port size of the 4(A), 2(B), 1(P), and 3/5(E) ports. When replacing it, pull out the fitting assembly after removing the clip with a flat head screwdriver, etc. To mount a new fitting assembly, insert it into place and then fully reinsert the clip.

<td>Specific Product Precautions 4</td>
</tr>
</tbody>
</table>

Note 1) To change the port size of the 1(P), 3/5(E) ports into the port sizes other than ø8 (straight), specify the change by means of the manifold specification sheet.

Note 2) Be careful to avoid damage or contamination to the O-rings, as this can cause air leakage.

Note 3) When removing a straight-type fitting assembly from a valve, after removing the clip, attach tubing or a plug (KJP-02, KQP-□□□□) to the one-touch fitting, and pull it out while holding the tubing or plug. If it is pulled out while holding the release button of the fitting assembly (resin part), the release button may be damaged.

Note 4) Be sure to turn off the power and stop the supply of air before disassembly. Furthermore, since air may remain inside the actuator, piping and manifold, confirm that the air is completely exhausted before starting any work.

Note 5) While inserting a tubing into an elbow-type fitting assembly, hold the main body of the assembly by hand. Failure to do so will exert an undue force on the valve or the fitting assembly, resulting in air leakage or damage.
One-touch Fittings

**Caution**
The pitch of the SJ series piping ports (A, B etc.) has been set assuming the use of KJ series one-touch fittings. Therefore, when using fittings with an M3 or M5 port block assembly, there may be some interference between fittings, depending on the type and size, so please use after checking dimensions in the catalog for the pipe fitting being used.

1. Tube attachment/detachment for one-touch fittings

   1) Attaching of tubing
   - (1) Take a tube having no flaws on its periphery and cut it off at a right angle. When cutting the tube, use tube cutters TK-1, 2 or 3. Do not use pinchers, nippers or scissors, etc. If cutting is done with tools other than tube cutters, there is the danger that the tube may be cut diagonally or become flattened, etc., making a secure installation impossible, and causing problems such as the tube pulling out after installation or air leakage.
   - (2) Grasp the tube and push it in slowly, inserting it securely all the way into the fitting.
   - (3) After inserting the tube, pull it on lightly to confirm that it will not come out. If it is not installed securely all the way into the fitting, this can cause problems such as air leakage or the tube pulling out.

   2) Detaching of tubing
   - (1) The 4(A) and 2(B) ports use the KJ series, so the tube can be removed by pressing on part of the release bush. However, for the 1(P) and 3/5(E) ports, please press the release bush evenly as before.
   - (2) Pull out the tube while holding down the release button so that it does not come out. If the release button is not pressed down sufficiently, there will be increased bite on the tube and it will become more difficult to pull it out.
   - (3) When the removed tube is to be used again, cut off the portion which has been chewed before reusing it. If the chewed portion of the tube is used as is, this can cause trouble such as air leakage or difficulty in removing the tube.

**How to Use Plug Connector**

**Caution**
When attaching and detaching a connector, first shut off the electric power and the air supply. Also, crimp the lead wires and sockets securely.

1. Attaching and detaching connectors
   - To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever’s pawl is pushed into the groove and locks.
   - To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

2. Crimping of lead wires and sockets
   - Peel 3.2 to 3.7 mm of the tip of lead wire, enter the core wires neatly into a socket and crimp it with a special crimp tool. Be careful so that the cover of lead wire does not enter into the crimping part. (Crimping tool: Model no. DXT170-75-1)

3. Attaching and detaching lead wires with sockets
   - **Attaching**
     - Insert the sockets into the square holes of the connector (with A, B, C, and N indication), and continue to push the sockets all the way in until the lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Next, confirm that they are locked by pulling lightly on the lead wires.
   - **Detaching**
     - To detach a socket from a connector, pull out the lead wire while pressing the socket’s hook with a stick having a thin tip (approx. 1 mm). If the socket is used again, spread the hook outward.

**Other Tubing Brands**

**Caution**
When using tube other than SMC brand, confirm the following specifications are satisfied with respect to the outside diameter tolerance of the tube.

1) Nylon tubing within ±0.1 mm
2) Soft nylon tubing within ±0.1 mm
3) Polyurethane tubing within ±0.15 mm, within –0.2 mm

Do not use tubing which does not meet these outside diameter tolerances. It may not be possible to connect them, or they may cause other troubles, such as air leakage or the tube pulling out after connection.

### Plug Connector Lead Wire Length

**Caution**

Plug connector lead wires have a standard length of 300 mm, however, the following lengths are also available.

<table>
<thead>
<tr>
<th>Connector Assembly Part No.</th>
<th>Lead Wire Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single solenoid SJ3000-46-S</td>
<td>Nil, 600 mm, 1000 mm, 1500 mm, 2000 mm, 2500 mm, 3000 mm</td>
</tr>
<tr>
<td>For 3 position type SJ3000-46-D</td>
<td>300 mm, 600 mm, 1000 mm, 1500 mm, 2000 mm, 2500 mm, 3000 mm, 5000 mm</td>
</tr>
<tr>
<td>For 4 position type</td>
<td>300 mm, 600 mm, 1000 mm, 1500 mm, 2000 mm, 2500 mm, 3000 mm, 5000 mm</td>
</tr>
</tbody>
</table>

For single solenoid Without lead wire: SJ3000-46-S-N (Connector, Socket x 2 pcs. only)

For double solenoid Without lead wire: SJ3000-46-D-N (Connector, Socket x 3 pcs. only)

**How to Order**

Include the connector assembly part number together with the part number for the plug connector’s solenoid valve without connector. (Example) Lead wire length 2000 mm SJ3160N-5MOZ-C6 SJ3000-46-S-20

---

### Connector Assembly Part No. (for Junction Common)

<table>
<thead>
<tr>
<th>Single solenoid</th>
<th>For junction common</th>
</tr>
</thead>
<tbody>
<tr>
<td>SJ3000-46-SC-</td>
<td>SJ3000-46-SC-</td>
</tr>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>SJ3000-46-DC-</td>
<td>Nil, 300 mm, 600 mm, 1000 mm, 1500 mm, 2000 mm, 2500 mm, 3000 mm, 5000 mm</td>
</tr>
</tbody>
</table>

**How to Order**

Indicate the part no. of the connector assembly for the manifold and solenoid valve. If the arrangement is complicated, please specify them by means of the manifold specification sheet.

Note 1) Applications like connectors not wired to a valve is not possible.
Note 2) For the solenoid valve, please designate "No connector (MOZ)" for the connector type.

Note 3) Connector assembly with lead wire for place where the signals are transmitted to the common wiring. (Only the valves of first station and/or last station of manifold are compatible to connector with lead wire for common.)

---

### Connector Assembly for Manifolds (for Junction Common)

**Caution**

Using the connector assembly (for junction common) for solenoid valves installed in the manifold reduces the labor involved in wiring work because common wiring for all solenoid valves is integrated into a single wire.

Series SJ2000/3000
Specific Product Precautions 7

Be sure to read this before handling. Please refer to "Precautions for Handling Pneumatic Devices" (M-03-E3A) for Safety Instructions and 3/4/5 Port Solenoid Valves Precautions.

Wiring Instructions for Connector Assembly (for Junction Common)

⚠️ Caution

If only connector assembly (for junction common) is ordered, please wire according to the instructions in the diagram below. For details on socket mounting, please refer to "How to Use Plug Connector" on the back page 7.

How to Wire to PC Wiring System Compliant Power Supply Terminal

⚠️ Caution

Wire connection instructions
1. Strip 6.5 to 7.5 mm from the tip of the lead wire.
2. Loosen the terminal screws (slotted screws) of the power supply terminal connectors, plug the core wire of the lead wire into the square holes of the connector, tighten terminal screws at the proper torque, and fasten them securely. (Gently pull the lead wire and check that it is fastened.)

Precautions
• To remove the power supply terminal connector, pull it upward as is. When mounting, push it in until it makes a snapping noise.
• When connecting wire, be careful because using lead wire that is outside of compatible lead wire ranges, or that are tightened to anything other than the proper torque, creates a risk of defective contact and other problems.

Back page 9
Safety Instructions

Be sure to read “Precautions for Handling Pneumatic Devices” (M-03-E3A) before using.

Record of changes

B edition
- Addition of non-plug-in type, individual wiring manifold
- Addition of EX510 serial wiring type
- Addition of PC wiring type
- Option: Addition of regulator block, intermediate connector block
- Addition of vacuum release valve with restrictor SJ3A6 series
- Number of pages from 48 to 96.

LZ
