Booster Regulator/Air Tank

Increase factory air pressure by up to 4 times! Air-only operation requires no power supply, reduces heat generation, and allows easy installation.

New

Renewed model with pressure increase ratio 2 to 4 times (VBA11A)

No power supply or wiring needed

There is no need to install dedicated electrical wiring.

Easy installation

Simply insert the unit in the air line. Requires far less space than installing the compressor.

Low heat generation

Very little heat is generated because no electricity is used, and there is no impact on cylinders, solenoid valves, etc.

Air-only operation

Operation is safe because no electricity is used.

Booster Regulator/Series VBA

Air Tank/Series VBAT

Series VBA/VBAT
Booster Regulator Series VBA

**Improved service life**
- Doubled that of the conventional model
  - Floating piston structure (PAT. PEND)
  - Grease retaining groove
  - Except VBA10A, 11A

**Improved reliability**
- Built-in mesh filter at IN port
  - Prevents operation failure due to foreign matter.

**Anti-condensation**
- Integrated air-feeding tube with the main tube
  - Mitigates condensation caused by cooling during exhaust expansion.

**Reduced noise**
- Reduced by 13 dB (A) compared with the conventional model
  - Metal noise reduced by a bumper on the impact part of the switch valve
  - Exhaust noise reduced by a high-noise reduction silencer

**1/8” gauge ports**
- Allows use of standard fittings for remote pressure monitoring, etc.
  - Gauge ports changed from 1/16” to 1/8” (VBA1□A, 2□A)

**NEW**
- Elbow silencer added (Option)
  - Space saving when installed has been realized.
    - Except VBA2□A, 4□A

**Features**
- Air-operated type
  - Max. operating pressure 1.6 MPa
  - Fourfold pressure increase type

- VBA20A
- VBA40A
- VBA10A
- VBA22A
- VBA42A
- VBA43A
- VBA11A

IMPOTENT
## Air Tank Series VBAT

**Perfect fit with a booster regulator**

This is an air tank to which a booster regulator can be connected compactly. It can be used alone as a tank. The pressure vessel law is different from country to country, so as an air tank suitable to a country needs to be confirmed.

**Extensive product lineup**

To meet a variety of usage environment and pressure specifications, models are available in two materials, stainless steel 304 and carbon steel (SS400), and in four sizes ranging from 5 liters to 38 liters.

**Caution**

When used as a single unit (not connected with a booster regulator) and pressurized at over 1 MPa at normal temperatures, the air tank falls under the scope of the “High Pressure Gas Safety Act” in Japan.
**Booster Regulator**

**Series VBA**

**How to Order**

**VBA 40A**

</tr>
</thead>
<tbody>
<tr>
<td>Mist separator</td>
<td>AM250C-02</td>
</tr>
<tr>
<td>Exhaust cleaner</td>
<td>AMC310-03</td>
</tr>
</tbody>
</table>

Note 1) Refer to page 12 for air tanks, Best Pneumatics No. 5 for mist separators and Best Pneumatics No. 6 for exhaust cleaners.
Note 2) Refer to the separate operation manual for the connection method.

Caution

1. System configuration
   • The IN port of the booster regulator has metallic mesh to prevent dust from entering the booster regulator. However, it cannot remove dust continuously or separate drainage. Make sure to install a mist separator (AM series) on the inlet side of the booster regulator.
   • The booster regulator has a sliding part inside, and it generates dust. Also, install an air purification device such as an air filter or a mist separator on the outlet side as necessary.
   • Connect a lubricator to the outlet side, because the accumulated oil in the booster regulator may result in a malfunction.

2. Exhaust air measures
   • Provide a dedicated pipe to release the exhaust air from each booster regulator. If exhaust air is converged into a pipe, the back pressure that is created could cause improper operation.
   • Depending on the necessity, install a silencer or an exhaust cleaner on the exhaust port of the booster regulator to reduce the exhaust noise.

3. Maintenance space
   • Allow the sufficient space for maintenance and inspection.

Pressure Characteristics

Outlet pressure (MPa)

Inlet pressure (MPa)

Charge Characteristics

VBA10A
- The time required to charge pressure in the tank from 0.7 MPa to 0.95 MPa at 0.5 MPa supply pressure:
  \[
  \frac{P_2}{P_1} = \frac{0.95}{0.5} = 1.9
  \]
  With the pressure increase ratio from 1.4 to 1.9, the charge time of \(23 - 6 = 17\) sec. (t) is given by the graph. Then, the charge time \(T\) for a 10 L tank:
  \[
  T = t \times \frac{V}{10} = 17 \times \frac{10}{10} = 17\ \text{(s)}.
  \]

VBA20A, 22A
- The time required to charge pressure in the tank from 0.8 MPa to 1.0 MPa at 0.5 MPa supply pressure:
  \[
  \frac{P_2}{P_1} = \frac{1.0}{0.5} = 2.0
  \]
  With the pressure increase ratio from 1.6 to 2.0, the charge time of \(11.5 - 3.8 = 7.7\) sec. (t) is given by the graph. Then, the charge time \(T\) for a 100 L tank:
  \[
  T = t \times \frac{V}{100} = 7.7 \times \frac{100}{10} = 77\ (s).
  \]

VBA40A, 42A
- The time required to charge pressure in the tank from 0.8 MPa to 1.0 MPa at 0.5 MPa supply pressure:
  \[
  \frac{P_2}{P_1} = \frac{1.0}{0.5} = 2.0
  \]
  With the pressure increase ratio from 1.6 to 2.0, the charge time of \(3.5 - 1.1 = 2.4\) sec. (t) is given by the graph. Then, the charge time \(T\) for a 100 L tank:
  \[
  T = t \times \frac{V}{100} = 2.4 \times \frac{100}{10} = 24\ (s).
  \]
Flow-rate Characteristics

Outlet pressure (MPa) vs. Outlet air flow rate (L/min (ANR))

Pressure Characteristics

Outlet pressure (MPa) vs. Inlet pressure (MPa)

Charge Characteristics

Charge time per 10 L (s) vs. Pressure increase ratio $P_2/P_1$

VBA43A

- The time required to charge pressure in the tank from 0.8 MPa to 1.0 MPa at 0.5 MPa supply pressure:
  
  $\frac{P_2}{P_1} = \frac{0.8}{0.5} = 1.6 \quad \frac{P_2}{P_1} = \frac{1.0}{0.5} = 2.0$

  With the pressure increase ratio from 1.6 to 2.0, the charge time of 4.5 – 1.3 = 3.2 sec. (t) is given by the graph. Then, the charge time (T) for a 100 L tank:
  
  $T = t \times \frac{V}{10} = 3.2 \times \frac{100}{10} = 32$ (s).

VBA11A

- The time required to charge pressure in the tank from 1.0 MPa to 1.5 MPa at 0.5 MPa supply pressure:
  
  $\frac{P_2}{P_1} = \frac{1.0}{0.5} = 2.0 \quad \frac{P_2}{P_1} = \frac{1.5}{0.5} = 3.0$

  With the pressure increase ratio from 2.0 to 3.0, the charge time of 147 – 58 = 89 sec. (t) is given by the graph. Then, the charge time (T) for a 10 L tank:
  
  $T = t \times \frac{V}{10} = 89 \times \frac{10}{10} = 89$ (s).

Pulsation

Pulsation is decreased with a tank. If the outlet capacity is undersized, pulsation may occur.

VBA43A

- Performance of air tank
  
  - Alleviates the pulsation generated on the outlet side.
  
  - When air consumption exceeds air supply during intermittent operation, required air will be accumulated in the tank for use. This does not apply for continuous operation.

VBA11A

Conditions:

- Inlet pressure: 0.5 MPa
- Outlet set pressure: 1 MPa
- Flow rate: Between 0 and max. flow rate

- Supply pressure: 1 MPa
- Flow rate: Between 0 and max. flow rate

- Pressure increase ratio $P_2/P_1$
Sizing can be achieved with the SMC Pneumatic System Energy Saving Program Ver. 3.1, which can be downloaded from the SMC website: http://www.smcworld.com/

**START**

Provide requisite conditions for selection.

Calculate required air flow rate \( Q \).

Select booster regulator size from flow-rate characteristics table.

Judgement of flow rate

- **YES**
  - Obtain the tank capacity \( V \).
  - Select the tank capacity over \( V \).
  - Calculate time \( T \) from charge characteristics table.

- **NO**
  - Extend stop time \( T_s \) up to charge time \( T \) or more.

**END**

**Judgement of charge time**

- **YES**
- **NO**

**Calculate time \( T \) from table.**

**Other conditions:**
- \( Q \) [L/min (ANR)]: Required air flow rate
- \( Q_b \) [L/min (ANR)]: Outlet air flow rate of booster regulator
- \( T_c \) [s]: Cylinder operating time
- \( T_s \) [s]: Cylinder stop time
- \( P_1 \) [MPa]: Inlet pressure
- \( P_2 \) [MPa]: Necessary supply pressure to cylinder
- \( P_3 \) [MPa]: Tank charge pressure
- \( T_r \) [s]: Time to charge (Time to charge to \( P_2 \))
- \( T_r \) [s]: Time to charge (Time to charge from \( P_2 \) to \( P_3 \))
- \( T \) [s]: Time to charge (Time to charge from \( P_1 \) to \( P_3 \))
- \( Z \): Number of booster regulators

**Note 1)** \( P_2 \) is the necessary supply pressure to a cylinder, and set the pressure below the lower limit of pressure inside the tank with a regulator. Adjust the pressure taking the maximum operating pressure of equipment in use into consideration.

**Note 2)** \( P_3 \) is the output pressure of the booster regulator, which is also the upper limit of charge pressure to the tank.

**Caution**

- Use the VBA11A (pressure increase ratio 4) with pressure increase ratio 2 to 4. Usage of pressure increase ratio below 2 is preferred for the VBA10A (pressure increase ratio 2).
- A stable operation and increased life expectancy will result.
- Inlet supply pressure volume is (approximately twice (pressure increase ratio 2), approx. 4 times (pressure increase ratio 4)) the volume of the outlet side. Booster regulator requires the inlet side volume which is the sum of the flow volume running into the outlet side and the volume exhausted from E port (for driving), because air is the power source.

**Example**

- \( Q_b \) [L/min (ANR)]: 1050
- \( Q \) [L/min (ANR)]: 600
- \( T_c \) [s]: 20
- \( T_s \) [s]: 5
- \( P_1 \) [MPa]: 0.1
- \( P_2 \) [MPa]: 0.8
- \( P_3 \) [MPa]: 1.1

**Obtain the tank capacity \( V \).**

- \( V \) [L] = \( \frac{(Q - Q_b) \times (T_c \times K/60)}{(0.01 \times 0.5 \times 60)} \)

**Select tank capacity over \( V \).**

- Select the VBA10A, which can be directly connected to the VBA20A.

**Calculate time \( T \) from charge characteristics table.**

- \( T \) [s] = \( \frac{V}{10} \times \frac{T_r}{Z} \)

**Avoid pulsation. (Max. 0.05 MPa)**

- **YES**
- **NO**

**Select the tank from table below.**

<table>

</tbody>
</table>

**Sizing can be achieved with the SMC Pneumatic System Energy Saving Program Ver. 3.1, which can be downloaded from the SMC website: http://www.smcworld.com/**
**Working Principle**

The IN air passes through the check valve to **booster chambers A and B**. Meanwhile, air is supplied to **drive chamber B** via the governor and the switching valve. Then, the air pressure from **drive chamber B** and **booster chamber A** are applied to the piston, boosting the air in **booster chamber B**. As the piston travels, the boosted air is pushed via the check valve to the OUT side. When the piston reaches to the end, the piston causes the switching valve to switch, so that **drive chamber B** is in the exhaust state and **drive chamber A** is in the supply state respectively. Then, the piston reverses its movement, this time, the pressures from **booster chamber B** and **drive chamber A** boosts the air in **booster chamber A** and sends it to the OUT side. The process described above is repeated to continuously supply highly pressurized air from the IN to the OUT side. The governor establishes the outlet pressure by handle operation and pressure adjustment in the drive chamber by feeding back the outlet pressure.

**Circuit Example**

- **When only some of the machines in the plant require high-pressure air**, booster regulators can be installed for only the equipment that requires it. This allows the overall system to use low-pressure air while accommodating machines requiring high-pressure air.

  ![Diagram of VBA series](image)

- **When charging a tank or the like from a source at atmospheric pressure**, a circuit with a check valve can be used to reduce the charge time by allowing air to pass through the check valve up to the inlet pressure.

  ![Diagram of check valve](image)

Initially, inlet pressure \(P_1\) passes through the check valve, fills \(P_2\), and results in \(P_1 = P_2\).

- **When the actuator output is insufficient but space limitations prohibit switching to a larger cylinder diameter**, a booster regulator can be used to increase the pressure. This makes it possible to boost the output without replacing the actuator.

- **When a certain level of output is required but the cylinder size must be kept small so that the driver remains compact**.

- **When only one side of the cylinder is used for work**, booster regulators can be installed only on the lines that require them to reduce the overall air consumption volume.
### Design

**Warning**

1. Warning concerning abnormal outlet pressure
   - If there is a likelihood of causing an outlet pressure drop due to unforeseen circumstances such as equipment malfunction, thus leading to a major problem, take safety measures on the system side.
   - Because the outlet pressure could exceed its set range if there is a large fluctuation in the inlet pressure, leading to unexpected accidents, take safety measures against abnormal pressures.
   - Operate the equipment within its maximum operating pressure and set pressure range.

2. Residual pressure measures
   - Connect a 3-port valve to the OUT side of the booster regulator if the residual pressure must be released quickly from the outlet pressure side for maintenance, etc. (Refer to the diagram below.) The residual outlet pressure side cannot be released even if the 3-port valve is connected to the IN side because the check valve in the booster regulator will activate.

   ![Diagram of 3-port valve connection](image)

   - After operation is finished, release the supply pressure at the inlet. This stops the booster regulator from moving needlessly and prevents operating malfunctions.

### Selection

**Caution**

1. Check the specifications.
   - Consider the operating conditions and operate this product within the specification range that is described in this catalog.

2. Selection
   - Based on the conditions (such as pressure, flow rate, takt time) required for the outlet side of the booster regulator, select the size of the booster regulator in accordance with the selection procedures described in this catalog or model selection program.
   - Use the VBA11A (pressure increase ratio 4) with pressure increase ratio 2 to 4. Usage of pressure increase ratio below 2 is preferred for the VBA10A (pressure increase ratio 2). A stable operation and increased life expectancy will result.
   - Inlet supply pressure volume is (approximately twice (pressure increase ratio 2), approx. 4 times (pressure increase ratio 4)) the volume of the outlet side. Booster regulator requires the inlet side volume which is the sum of the flow volume running into the outlet side and the volume exhausted from E port (for driving), because air is the power source.
   - When running continuously for longer periods of time, confirm the life expectancy. The life expectancy of a booster regulator is dependent upon the operational cycle. Thus, when used for driving cylinders, etc. in the outlet side, life expectancy will be reduced.
   - Make sure the outlet pressure is set 0.1 MPa or higher than the inlet pressure. A pressure difference below 0.1 MPa makes the operation unstable and may result in a malfunction.

### Mounting

**Caution**

1. Transporting
   - When transporting this product, hold it lengthwise with both hands. Never hold it by the black handle that protrudes from the center because the handle could become detached from the body, causing the body to fall and leading to injury.

2. Installation
   - Install this product so that the silver-colored tie-rods and cover are placed horizontally. If mounted vertically, it may result in a malfunction.
   - Because the piston cycle vibration is transferred, use the following mounting bolts (VBA1: M5; VBA2, 4: M10) and tighten them with the specified torque (VBA1: 3 N·m; VBA2, 4: 24 N·m).
   - If the transmission of vibration is not preferred, insert an isolating rubber material before installation.
   - Mount the pressure gauge with a torque of 7 to 9 N·m.

### Piping

**Caution**

1. Flushing
   - Use an air blower to flush the piping to thoroughly remove any cutting chips, cutting oil, or debris from the piping inside, before connecting them. If they enter the inside of the booster regulator, they could cause the booster regulator to malfunction or its durability could be affected.

2. Piping size
   - To bring the booster regulator's ability into full play, make sure to match the piping size to the port size.

### Air Supply

**Caution**

1. Quality of air source
   - Connect a mist separator to the inlet side near the booster regulator. If the quality of the compressed air is not thoroughly controlled, the booster regulator could malfunction (without being able to boost) or its durability could be affected.
   - If dry air (atmospheric pressure dew point: −17°C or less) is used, the life expectancy may be shortened because dry air will accelerate evaporation of grease inside.

### Operating Environment

**Caution**

1. Installation location
   - Do not install this product in an area that is exposed to rainwater or direct sunlight.
   - Do not install in locations influenced by vibrations. If it must be used in such an area due to unavoidable circumstances, please contact SMC beforehand.
1. **Setting the pressure on the handle-operated type**
   - If air is supplied to the product in the shipped state, the air will be released.
   - Set the pressure by quickly pulling up on the governor handle, releasing the lock, and rotating the handle in the direction of the arrow (+).
   - There is an upper and lower limit for the handle rotation. If over-rotating the handle even after reaching to the limit, the internal parts may be damaged. If the handle suddenly feels heavy while being turned, stop turning the handle.
   - Once the setting is completed, push the handle down and lock it.
   - To decrease the outlet pressure, after the pressure has been set, rotate the handle in the direction of the arrow (–). The residual air will be released from the area of the handle, due to the relief construction of the governor.
   - To reset the pressure, first reduce the pressure so that it is lower than the desired pressure; then, set it to the desired pressure.

2. **Setting the pressure on the air-operated type**
   - Connect the outlet pipe of the pilot regulator for the remote control to the pilot port (P). (Refer to the diagram below.)
   - Refer to the graph below for the relationship between the pilot pressure and outlet pressure.
   - The AR20 and AW20 are recommended for the pilot regulator.

   ![Diagram of Pilot Regulator](image)

   - The outlet pressure is twice the pilot pressure.
   - When the inlet pressure is 0.4 MPa:
     - Pilot pressure: 0.2 MPa to 0.4 MPa
     - Outlet pressure: 0.4 MPa to 0.8 MPa

3. **Draining**
   - If this product is used with a large amount of drainage accumulated in the filter, mist separator or tank, the drainage could flow out, leading to equipment malfunction. Therefore, drain the system once a day. If it is equipped with an auto drain, check its operation once a day.

4. **Exhaust**
   - Exhausting time from E port may be longer for a booster regulator which is set to switch in longer hour intervals. This is not an abnormal phenomenon.

5. **Maintenance**
   - Life expectancy varies depending on the quality of air and the operating conditions. Signs that the unit is reaching the end of its service life include the following:
     - Constant bleed from under the handle.
     - Air exhaust noise can be heard from the booster regulator at 10 to 20 second intervals even when there is no air consumption on the outlet side.
   - Conduct maintenance earlier than scheduled in such cases.
   - When maintenance is required, confirm the model and serial number of the booster regulator, and please contact SMC for maintenance kit.
   - Conduct maintenance according to the specified maintenance procedure by individuals possessing enough knowledge and experiences in maintaining pneumatic equipment.
   - The list of replacement parts and kit number are shown on page 9, and the figure shows the position of the parts.

### Made to Order

1. **Copper-free/Fluorine-free**
   - The inner or outer copper parts material has been changed to stainless steel or aluminum. The fluorine resin parts have been changed to general resin.

2. **CE explosion-proof directive (ATEX) compliant**
   - For booster regulator with pressure gauge, please consult SMC.
   - This option cannot be selected for air tank with safety valve.

3. **Ozone resistant**
   - Ozone resistance is strengthened through the use of fluororubber (diaphragm) and hydrogenated NBR (valve, rod seal) for the rubber parts of the seal material.

**Standard model no.**

- 56
- 80

**Made to Order**

- **Copper-free/Fluorine-free**
- **CE explosion-proof directive (ATEX): Category 3GD**
- **Ozone resistant**

*For detailed dimensions, specifications and lead times, please contact SMC.*
Air Tank
Series VBAT

How to Order

• Compact connections are possible with booster regulators.
• It can be used alone as a tank.
• Also partially compatible with overseas standards

Note 1) Customers are responsible for preparing a safety valve.
Note 2) Safety valve does not meet ASME specifications.

Caution

When used as a single unit (not connected with a booster regulator) and pressurized at over 1 MPa at normal temperatures, the air tank falls under the scope of the “High Pressure Gas Safety Act” in Japan.

Note) The thread type for each port is Rc.

Note A safety valve port is provided only when option R or S is selected.

⚠️ Warning

1. Operating pressure
- Operate this product below the maximum operating pressure. If it is necessary, take appropriate safety measures to ensure that the maximum operating pressure is not exceeded.
- When the tank alone is used
  Use a pressure switch or a safety valve to ensure that the maximum operating pressure is not exceeded.

2. Connection
- Connect a filter or a mist separator to the OUT side of the tank. Because the inner surface of the tank is untreated, there is a possibility of dust flowing out to the outlet side.
- A VBA booster regulator can be connected directly with the tank accessories as indicated combinations below.

⚠️ Caution

- Consider the operating conditions and operate this product within the specification range.
- When using the air tank with a booster regulator, refer to “Sizing” on page 5 or SMC Pneumatic System Energy Saving Program.

⚠️ Caution

1. Accessories
- Refer to the operation manual (VBAT-M1, M2, M3, M4) regarding combining booster regulators with older model air tanks.
- The accessories are secured by bands to the feet of the air tank. Once removed, make sure not to lose them.

2. Installation
- Install the tank away from people. It is dangerous if the accumulated air inside the tank were to seep out.
- Do not mount the air tank on a moving part or a place with vibration.
- When connecting a booster regulator with the tank, refer to the operation manual first, which is provided with the air tank before assembling.
- Refer to the operation manual regarding mounting methods when using long bolts.
- To mount the air tank on a floor surface, use the four holes to secure the tank with bolts or anchor bolts.

⚠️ Warning

1. Inspection
- The use of pressure vessels could lead to an unexpected accident due to external damage or internal corrosion caused by drainage. Therefore, make sure to check periodically for external damage, or the extent of internal corrosion through the port hole. An ultrasonic thickness indicator may also be used to check for any reduction in material thickness.

2. Draining
- If this product is used with a large amount of drainage, the drainage could flow out, leading to equipment malfunction or corrosion inside the tank. Therefore, drain the system once a day.

⚠️ Caution

1. Accessories
- Refer to the operation manual (VBAT-M1, M2, M3, M4) regarding combining booster regulators with older model air tanks.
- The accessories are secured by bands to the feet of the air tank. Once removed, make sure not to lose them.

2. Installation
- Install the tank away from people. It is dangerous if the accumulated air inside the tank were to seep out.
- Do not mount the air tank on a moving part or a place with vibration.
- When connecting a booster regulator with the tank, refer to the operation manual first, which is provided with the air tank before assembling.
- Refer to the operation manual regarding mounting methods when using long bolts.
- To mount the air tank on a floor surface, use the four holes to secure the tank with bolts or anchor bolts.

Maintenance

1. Inspection
- The use of pressure vessels could lead to an unexpected accident due to external damage or internal corrosion caused by drainage. Therefore, make sure to check periodically for external damage, or the extent of internal corrosion through the port hole. An ultrasonic thickness indicator may also be used to check for any reduction in material thickness.

2. Draining
- If this product is used with a large amount of drainage, the drainage could flow out, leading to equipment malfunction or corrosion inside the tank. Therefore, drain the system once a day.

<td>VBAT-V1</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note 1) The set pressure of the safety valve cannot be changed.
Note 2) The safety valve is a safety measure that protects the tank from excess pressure. The valve opens automatically when the specified pressure is reached, releasing excess pressure inside the tank. The valve closes again when the pressure drops below a designated value. Select a pressure valve appropriate for the maximum operating pressure specification of the tank.

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Danger,” “Warning” or “Caution.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\(^1\), and other safety regulations.

### Caution:
Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

### Warning
Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

### Danger
Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

---

### Safety Instructions

1. **Warning**
   - The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
   - Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. **Only personnel with appropriate training should operate machinery and equipment.**
   - The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. **Do not service or attempt to remove product and machinery/equipment until safety is confirmed.**
   - The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
   - When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.

4. **Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.**
   - Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   - Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion, and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutches and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.

5. **An application which could have negative effects on people, property, or animals requiring special safety analysis.**
6. **Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.**

---

### Compliance Requirements

1. **Limited warranty and Disclaimer**
   - The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.
   - Read and accept them before using the product.

2. **Limited warranty and Disclaimer**
   - 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered.\(^2\)
   - Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

3. **Compliance Requirements**
   - 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
   - 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.
