Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution", "Warning" or "Danger". They are all important notes for safety and must be followed in addition to International standards (ISO/IEC) *1) and other safety regulations.

*1) ISO 4414: Pneumatic fluid power -- General rules relating to systems
ISO 4413: Hydraulic fluid power -- General rules relating to systems
IEC 60204-1: Safety of machinery -- Electrical equipment of machines (Part 1: General requirements)
etc.

**Caution**: CAUTION indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

**Warning**: WARNING indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

**Danger**: DANGER indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

---

**Warning**

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
   Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.
   The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.
   1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runway of the driven objects have been confirmed.
   2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
   3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
   1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalogue.
   3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
   4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.
Caution

The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements". Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered. *2) Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.

   *2) Vacuum pads are excluded from this 1 year warranty.
   A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
   Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.

2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulation of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.
Operator

- This operation manual is intended for those who have knowledge of machinery using pneumatic equipment, and have sufficient knowledge of assembly, operation and maintenance of such equipment. Only those persons are allowed to perform assembly, operation and maintenance.
- Read and understand this operation manual carefully before assembling, operating or providing maintenance to the product.

Safety Instructions

**Warning**

- Do not disassemble, modify (including changing the printed circuit board) or repair. An injury or failure can result.
- Do not operate the product outside of the specifications. Do not use for flammable or harmful fluids. Fire, malfunction, or damage to the product can result. Verify the specifications before use.
- Do not operate in an atmosphere containing flammable or explosive gases. Fire or an explosion can result. This product is not designed to be explosion proof.
- Do not use the product in a place where static electricity is a problem. Otherwise it can cause failure or malfunction of the system.
- If using the product in an interlocking circuit:
  - Provide a double interlocking system, for example a mechanical system
  - Check the product regularly for proper operation
  Otherwise malfunction can result, causing an accident.
- The following instructions must be followed during maintenance:
  - Turn off the power supply
  - Stop the air supply, exhaust the residual pressure and verify that the air is released before performing maintenance
  Otherwise an injury can result.

**Caution**

- Do not touch the terminals and connectors while the power is on. Otherwise electric shock, malfunction or damage to the product can result.
- After maintenance is complete, perform appropriate functional inspections and leak tests.
  Stop operation if the equipment does not function properly or there is a leakage of fluid.
  When leakage occurred from other parts except piping, the product might break.
  Cut off power supply and stop supplying fluid.
  Do not apply fluid at leaking condition.
  Safety cannot be assured in the case of unexpected malfunction.
- Use ferule made by Swagelock® (trade name: Swagelock® fittings) for TSJ fittings, packing and glands made by Cajon (trade name: Cajon VCR® fittings) for URJ fittings. Otherwise safety may not be secured due to leakage from joint.
  When using ferules, packing or glands made by other manufacture, be sure to perform helium leak test to verify no leakage.
NOTE

Follow the instructions given below when designing, selecting and handling the product.

- The instructions on design and selection (installation, wiring, environment, adjustment, operation, maintenance, etc.) described below must also be followed.
- Product specifications
  - The direct current power supply to combine should be UL approved as follows.
    Circuit (of Class2) which is of maximum 30 Vrms (42.4 V peak) or less, with UL1310 Class2 power supply unit or UL1585 Class2 transformer.
  - The Pressure switch is a approved product only if it has a mark on the body.
  - Use the specified voltage.
    Otherwise failure or malfunction can result.
  - Do not exceed the specified maximum allowable load.
    Otherwise it can cause damage or shorten the lifetime of the Pressure switch.
  - Design the product to prevent reverse current when the circuit is opened or the product is forced to operate for operational check.
    Reverse current can cause malfunction or damage to the product.
  - Input data to the Pressure switch is not deleted, even if the power supply is cut off.
    (Writing time: 1,000,000 times, Data duration: 10 years after power off)
  - Applicable fluid is a fluid that does not corrode SUS630 and SUS304.
    Do not use a fluid containing chemicals, synthetic oils including organic solvent, salt and corrosive gases.
    Otherwise, damage to the product and malfunction can result.
    Check the details of the specifications before using.
  - Use the specified measurement flow rate and operating pressure.
    Otherwise it can cause damage to the Pressure switch or inability to measure correctly.
  - Reserve a space for maintenance.
    Allow sufficient space for maintenance when designing the system.
● Product handling
  ● Installation
    • Tighten to the specified tightening torque.
      If the tightening torque is exceeded the mounting screws and brackets may be broken.
      If the tightening torque is insufficient, the product can be displaced and loosen the mounting screws.
      (Refer to "Mounting and Installation" on page 15.)
    • Do not apply excessive stress to the product when it is mounted with a panel mount.
      Otherwise damage to the product and disconnection from the panel mount can result.
    • Be sure to ground terminal FG when using a commercially available switch-mode power supply.
    • Do not drop, hit or apply shock to the Pressure switch.
      Otherwise damage to the internal parts can result, causing malfunction.
    • Do not pull the lead wire forcefully, not lift the product by pulling the lead wire. (Tensile force 49 N or less)
      Hold the body when handling to avoid the damage of the Pressure switch which lead to cause the failure and malfunction.
    • For piping of the Pressure switch, hold the piping with a spanner on the metal part of the piping (Piping attachment).
      Holding other part with spanner leads to damage the Pressure switch.
    • Eliminate any dust left in the piping by air blow before connecting the piping to the product.
      Otherwise it can cause damage or malfunction.
    • Do not insert metal wires or other foreign matter into the pressure measurement port.
      It can damage the pressure sensor causing failure or malfunction.
    • Never mount a product in a location that will be used as a foothold.
      The product may be damaged if excessive force is applied by stepping or climbing onto it.
    • If the entering of foreign material to the fluid is possible, install and pipe the filter or the mist separator to the inlet to avoid failure and malfunction.
  ● Wiring
    • Do not pull the lead wires.
      In particular, never lift a Pressure switch equipped with fitting and piping by holding the lead wires.
      Otherwise damage to the internal parts can result, causing malfunction or to be off the connector.
    • Avoid repeatedly bending or stretching the lead wire, or placing heavy load on them.
      Repetitive bending stress or tensile stress can cause the sheath of the wire to peel off, or breakage of the wire.
      If the lead wire can move, fix it near the body of the product.
      The recommended bend radius of the lead wire is 6 times the outside diameter of the sheath, or 33 times the outside diameter of the insulation material, whichever is larger.
      Replace the damaged lead wire with a new one.
    • Wire correctly.
      Incorrect wiring can break the Pressure switch.
    • Do not perform wiring while the power is on.
      Otherwise damage to the internal parts can result, causing malfunction.
    • Do not route wires and cables together with power or high voltage cables.
      Otherwise the product can malfunction due to interference of noise and surge voltage from power and high voltage cables to the signal line. Route the wires (piping) of the product separately from power or high voltage cables.
    • Confirm proper insulation of wiring.
      Poor insulation (interference from another circuit, poor insulation between terminals, etc.) can lead to excess voltage or current being applied to the product, causing damage.
    • Design the system to prevent reverse current when the product is forced to operate for operational check.
      Depending on the circuit used, insulation may not be maintained when operation is forced, allowing reverse current to flow, which can cause malfunction and damage the product.
    • Keep wiring as short as possible to prevent interference from electromagnetic noise and surge voltage.
      Do not use a cable longer than 10m.
      Wire the DC (-) line (blue) as close as possible to the power supply.
    • When analogue output is used, install a noise filter (line noise filter, ferrite element, etc.) between the switch-mode power supply and this product.
• Environment
  • Do not use the product in an environment that is constantly exposed to the splash of water. Otherwise failure or malfunction can result. Take measures such as using a cover.
  • Do not use the product in an environment where corrosive gases or fluids could be splashed. Otherwise damage to the product and malfunction can result.
  • Do not use in a place where the product could be splashed by oil or chemicals. If the product is to be used in an environment containing oils or chemicals such as coolant or cleaning solvent, even for a short time, it may be adversely affected (damage, malfunction, or hardening of the lead wires).
  • Do not use in an area where surges are generated. If there is equipment which generates a large amount of surge (solenoid type lifter, high frequency induction furnace, motor, etc.) close to the Pressure switch, this may cause deterioration or breakage of the internal circuit of the Pressure switch. Avoid sources of surge generation and crossed lines.
  • Do not use a load which generates surge voltage. When a surge-generating load such as a relay or solenoid is driven directly, use a Pressure switch with a built-in surge absorbing element.
  • The product is CE marked, but not immune to lightning strikes. Take measures against lightning strikes in the system.
  • Mount the product in a place that is not exposed to vibration or impact. Otherwise failure or malfunction can result.
  • Prevent foreign matter such as remnant of wires from entering the Pressure switch. Take proper measures for the remnant not to enter the Pressure switch in order to prevent failure or malfunction.
  • Do not use the product in an environment that is exposed to temperature cycle. Heat cycles other than ordinary changes in temperature can adversely affect the inside of the product.
  • Do not expose the product to direct sunlight. If using in a location directly exposed to sunlight, shade the product from the sunlight. Otherwise failure or malfunction can result.
  • Keep within the specified fluid and ambient temperatures range. The fluid and ambient temperatures is 5 to 50 °C. Operation under low temperature (5 °C or less) leads to cause damage or operation failure due to frozen moist in the fluid or air. Protection against freezing is necessary. Air dryer is recommended for elimination of drain and water. Avoid sudden temperature change even within specified temperature.
  • Do not operate close to a heat source, or in a location exposed to radiant heat. Otherwise malfunction can result.
  • Use operating fluid which does not corrode the part in contact with fluid which is made of SUS630 (for sensing part) or SUS304 (for fitting part). (Compatibility between fluid and material can be checked by contact to fluid supplier.)

• Adjustment and Operation
  • Turn the power on after connecting a load. Otherwise it can cause excess current causing instantaneous breakage of the Pressure switch.
  • Do not short-circuit the load. Although error is displayed when the Pressure switch load is short circuit, generated excess current lead to cause the damage of the Pressure switch.
  • Do not press the setting buttons with a sharp pointed object. It may damage the setting buttons.
  • If using the product to detect very small pressure rates, warm up the product for 10 to 15 minutes first. There will be a drift on the display and the analogue output of approximate 1% immediately after the power supply is turned on.
  • Perform settings suitable for the operating conditions. Incorrect setting can cause operation failure. For details of each setting, refer to page 21 to 43 of this manual.
  • The Pressure switch is compulsory turned off for 4 seconds after power supplied. For 4 seconds after supplying power, the measurement output is turned off.
  • Do not touch the LCD during operation. The display can vary due to static electricity.
• **Maintenance**
  - Turn off the power supply, stop the supplied air, exhaust the residual pressure and verify the release of air before performing maintenance.
  - There is a risk of unexpected malfunction.
  - Perform regular maintenance and inspections.
  - There is a risk of unexpected malfunction.
  - Perform drainage regularly.
  - If condensate enters the secondary side, it can cause operating failure of pneumatic equipment.
  - Do not use solvents such as benzene, thinner etc. to clean the Pressure switch.
  - They could damage the surface of the body and erase the markings on the body.
  - Use a soft cloth to remove stains. For heavy stains, use a cloth soaked with diluted neutral detergent and fully squeezed, then wipe up the stains again with a dry cloth.

• **Other**
  - If there is a possibility of water or drainage getting in, narrow the diameter of the piping to the Pressure switch, or make an orifice in the middle of the piping.
  - Although this Pressure switch uses stainless diaphragm pressure sensor which is not damaged by water, the drain contained in the air or water during vacuum release after confirming vacuuming collides with the pressure sensor and the inertia force of water or air containing the drain can damage the pressure sensor, and correct display of the pressure may not be available.
  - Extra attention is needed when the rear surface piping type is used.
  - The use of a resin piping can cause static electricity depending on the fluid.
  - Therefore, when connecting the Pressure switch, take appropriate measures against static electricity and separate the grounding for the Pressure switch from the grounding for other equipment which may generate a strong electromagnetic noise or high frequency.
  - Otherwise, static electricity may damage the Pressure switch.
### Model Indication and How to order

**Set pressure range**

Summary of Product parts

- Names of individual parts

- Indicator LED (Orange): Displays switch output condition.

- LCD display: Displays the current status of pressure, setting mode, selected indication unit and error code. Four display modes can be selected: display always in red or green, or display changing from green to red, or red to green, according to the output status.

- button (UP): Selects the mode or increases the ON/OFF set value. Press this button to change to the peak display mode.

- button (DOWN): Selects the mode or decreases the ON/OFF set value. Press this button to change to the bottom display mode.

- button (SET): Press this button to change to another mode and to set a value.
## Definition and terminology

<table>
<thead>
<tr>
<th>Terms</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>2-colour display&lt;br&gt;2 colours are used to indicate a value, which change according to the output status.</td>
</tr>
<tr>
<td>7</td>
<td>7-segment display&lt;br&gt;When &quot;8&quot; is shown on the display. It is called 7-segment because 8 consists of 7 pieces of &quot;-&quot; (segments)*</td>
</tr>
<tr>
<td>A</td>
<td>Analogue current output&lt;br&gt;Refer to &quot;Analogue output (function)&quot;.</td>
</tr>
<tr>
<td>A</td>
<td>Analogue output function&lt;br&gt;A function to output the voltage or current in proportion to the pressure.</td>
</tr>
<tr>
<td>A</td>
<td>Analogue voltage output&lt;br&gt;Refer to &quot;Analogue output (function)&quot;.</td>
</tr>
<tr>
<td>Auto preset</td>
<td>A function to automatically set up the pressure by having equipment hold and release a workpiece via vacuum adsorption. This function is used in an application where vacuum adsorption of a workpiece is confirmed by a Pressure switch.</td>
</tr>
<tr>
<td>Auto shift</td>
<td>A function to correct the set value of the switch output in accordance with the applied pressure in case the switch operation is unstable due to pulsation of applied pressure. This function is used in applications such as vacuum adsorption. The pressure when a signal is externally input is set as a reference value with which the pressure that turns the switch on or off can be shifted.</td>
</tr>
<tr>
<td>B</td>
<td>Bottom value display&lt;br&gt;Indicates the minimum pressure reached up to that moment.</td>
</tr>
<tr>
<td>C</td>
<td>Chattering&lt;br&gt;The problem of the switch output turning ON and OFF repeatedly around the set value at high frequency due to the effect of pulsation.</td>
</tr>
<tr>
<td>C</td>
<td>Chattering preventing function&lt;br&gt;A function to delay the response time of switch output in order to prevent chattering.</td>
</tr>
<tr>
<td>D</td>
<td>Digit (Minimum setting unit)</td>
</tr>
<tr>
<td>E</td>
<td>Error indication&lt;br&gt;With the self-diagnostic function of the Pressure switch, this indicates that there is an error which could cause a switch failure.</td>
</tr>
<tr>
<td>F</td>
<td>Fine adjustment mode&lt;br&gt;Refer to &quot;Fine adjustment of display value&quot;.</td>
</tr>
<tr>
<td>F</td>
<td>Fine adjustment of display value&lt;br&gt;A displayed pressure value can be adjusted within the range of ±5% R.D. (±5% of the displayed value). It is used if a true pressure value is known or to correct the difference of a displayed value of the measurement equipment nearby which measures the same pressure.</td>
</tr>
<tr>
<td>F</td>
<td>F.S. (full span/full scale)&lt;br&gt;Abbreviation for full span or full scale; this means the maximum fluctuation range of the Pressure switch rated value. For example, when the output voltage is 1 to 5[V], the F.S. will be 5-1 = 4[V]. (Ref: 1% F.S. = 4 × 0.01 = 0.04[V])</td>
</tr>
<tr>
<td>F</td>
<td>Function selection mode&lt;br&gt;This is a mode in which each function is set up, and is a separate menu from the pressure setup. If the setting needs to be changed, &quot;F*&quot;, each item can be set up. The items to be set up are: display colour, operation mode, output type, response time, display resolution, fine adjustment of indicated value, auto preset, power-saving mode and security code number.</td>
</tr>
<tr>
<td>Terms</td>
<td>Meaning</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Hysteresis</td>
<td>The difference between the pressure switch ON and OFF points, used to prevent chattering</td>
</tr>
<tr>
<td>Hysteresis mode</td>
<td>Refer to &quot;List of output modes&quot; on page 28.</td>
</tr>
<tr>
<td>Indication accuracy</td>
<td>The deviation between displayed pressure value and the true pressure.</td>
</tr>
<tr>
<td>Indication colour</td>
<td>The colour of the digital display. There are four choices: normally green, normally red, green (off) to red (on), and red (off) to green (on).</td>
</tr>
<tr>
<td>Indicator LED</td>
<td>The LED that turns on when the switch output is on.</td>
</tr>
<tr>
<td>Insulation resistance</td>
<td>Insulation resistance of the product itself. The resistance between an electrical circuit and the pressure switch body.</td>
</tr>
<tr>
<td>Indication resolution</td>
<td>How fine the rated pressure range can be segmented. (Example: If a product for 0 to 1 MPa can indicate pressure by 0.001 MPa, the display resolution is 1/1000.)</td>
</tr>
<tr>
<td>Indication unit</td>
<td>The unit of pressure used on the display.</td>
</tr>
<tr>
<td>Internal voltage drop</td>
<td>Refer to &quot;Residual voltage&quot;.</td>
</tr>
<tr>
<td>Key lock (function)</td>
<td>A function that locks the setting buttons so that no accidental setting changes can be made.</td>
</tr>
<tr>
<td>Load impedance</td>
<td>Refer to &quot;Max. load impedance&quot;.</td>
</tr>
<tr>
<td>Manual setup</td>
<td>Manual pressure set up without using auto preset. This term is used to distinguish from the pressure set up using auto preset.</td>
</tr>
<tr>
<td>Max. applied voltage</td>
<td>The maximum value of applied voltage available to the output wire of the NPN output.</td>
</tr>
<tr>
<td>Max. load current</td>
<td>The maximum current available to the output wire of the switch output.</td>
</tr>
<tr>
<td>Max. (Min.) load impedance</td>
<td>The maximum (minimum) load (resistance value and impedance) which can be connected to the output (output wire) of the analogue current output.</td>
</tr>
<tr>
<td>Measurement mode</td>
<td>The condition in which the pressure is detected and displayed and the switch output is operating. (Refer to &quot;Measurement mode&quot; on page 21.)</td>
</tr>
<tr>
<td>Min. setting unit</td>
<td>Refer to &quot;digit&quot;.</td>
</tr>
<tr>
<td>Normal output</td>
<td>The switch output operation in which the switch is turned on when pressure equal to or greater than the set value is detected. In the (hysteresis mode) window comparator mode, it is the operation in which the switch is turned on when pressure is within the switch output range (P1L to P1H or P2L to P2H). (Refer to &quot;List of output modes&quot; on page 28).</td>
</tr>
<tr>
<td>NPN (open collector) output</td>
<td>The switch output which uses the NPN transistor for output.</td>
</tr>
<tr>
<td>Terms</td>
<td>Meaning</td>
</tr>
<tr>
<td>--------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Operating mode</td>
<td>There are two choices, hysteresis mode and window comparator mode.</td>
</tr>
<tr>
<td>Orifice</td>
<td>A restriction.</td>
</tr>
<tr>
<td>Output impedance</td>
<td>The resistance value of a component between the voltage output element and the analogue voltage output. It is indicated as a resistance value which is converted in accordance with the condition in which resistance is directly connected to the voltage output element. There may be an error in the output voltage depending on this output impedance and the input impedance of customers' equipment. (example: If the Pressure switch with output impedance of 1kΩ is connected to the A/D converter to detect the analogue output of 5V, the detected voltage by the A/D converter becomes 5(V) × 1(MΩ)/(1(kΩ) + 1(MΩ)) ≈ 4.995(V), and there is an error of approximate 0.005 V).</td>
</tr>
<tr>
<td>Output type</td>
<td>The operation type of the switch output. Either normal output or reversed output can be selected. (Refer to &quot;List of output modes&quot; on page 28).</td>
</tr>
<tr>
<td>Peak value display</td>
<td>Displays the maximum pressure reached up to that moment.</td>
</tr>
<tr>
<td>Piping-port size</td>
<td>The size of the port on the switch body with which a device can be connected.</td>
</tr>
<tr>
<td>PNP (open collector) output</td>
<td>The switch output that uses the PNP transistor for output.</td>
</tr>
<tr>
<td>Power saving mode</td>
<td>The condition in which the display is turned off to reduce current consumption.</td>

</tbody>
</table>
Mounting and Installation

**Installation**

- **Mounting**
  - Mount the optional bracket and panel mount adapter to the Pressure switch.
  - When the Pressure switch is to be mounted in a place where water and dust splashes occur, insert a tube (O.D φ4 mm, I.D φ2.5 mm) into the air-relieving port of the Pressure switch.

- **Mounting with bracket**
  - Fix the bracket to the Pressure switch with the set screws M3×5 L (2 pcs.) supplied.
  - The required tightening torque is 0.98 Nm or less.

<Rear piping>

<Bottom piping>

![Diagram of back piping and bottom piping]

Panel cut-out dimensions

Options

- Panel mount adapter (Panel mount adapter A and B included)
  Model: ZS-35-B (Bottom piping)
  ZS-35-C (Rear piping)
- Panel mount adapter + Front protective cover
  Model: ZS-35-E (Bottom piping)
  ZS-35-F (Rear piping)

*: Panel thickness 1.0 to 5.0 mm
Piping

○ Connection using screw type piping
  * Connect suitable piping to the port.
  * To connect the hexagon socket head plug or fitting to the pressure port, hold the hexagon part of the pressure port with a suitable spanner. The required tightening torque is 13.6 Nm or less.

![Spanner (17 mm)](image)

○ Tube attachment
  * When the Pressure switch is used in a place where water and dust splashes may occur, insert a tube into the air-relieving port, and route the other end of the tube to a safe place away from water and dust. (refer to the figure below).

  <Rear piping>

  ![Air-relieving port](image)
  ![To a safe position away from water and dust](image)

  <Bottom piping>

  ![Air-relieving port](image)
  ![To a safe position away from water and dust](image)

*: Insert the tube into the air-relieving port until it bottoms out.
*: SMC TU0425 (polyurethane, O.D φ4, I.D φ2.5) suits to the Pressure switch.
Wiring

○ Connection
  • Connections should only be made with the power supply turned off.
  • Use a separate route for the Pressure switch wiring and any power or high voltage wiring. Otherwise, malfunction may result due to noise.
  • Ensure that the FG terminal is connected to ground when using a commercially available switch-mode power supply. When a switch-mode power supply is connected to the product, switching noise will be superimposed and the product specification can no longer be met. This can be prevented by inserting a noise filter, such as a line noise filter and ferrite core, between the switch-mode power supply and the product, or by using a series power supply instead of a switch-mode power supply.

○ Internal circuit and wiring example

- N
  NPN open collector output type
  Max. 28 V, 80 mA
  Residual voltage 1 V or less

- P
  PNP open collector output type
  Max. 80 mA
  Residual voltage 1 V or less

Pressure Setting

■Measurement mode
The measurement mode is the condition where the pressure is detected and displayed, and the switch function is operating.
This is the basic mode, and other modes should be selected for setting changes and other function settings.

The power is supplied
↓
Display to show the standard product
↓ 1 s
Display to show the unit specification
↓ 1 s
Display to show the product
↓ 1 s
Display to show the pressure range
↓ 1 s
Measurement mode

Setting the ON and OFF points of the Pressure switch.

Operation (Hysteresis mode)
When the pressure exceeds a set point, the Pressure switch will be turned ON.
When the pressure falls below the set point by the amount of hysteresis or more, the Pressure switch will be turned OFF.
The default setting of the Pressure switch is adjusted to be turned on at the central value between atmospheric pressure and the upper limit of rated pressure range, and turned off when the pressure decreases by 5% of the span between atmospheric pressure and the upper limit of rated pressure range.
(to change this setting, refer to page 22).
If this condition, shown below, is acceptable, then keep these settings.
<How to operate> ∗: The Pressure switch will also output during setting.

1. Press the button once in measurement mode. (Page 23)

2. [P_1] or [n_1] and the set value are displayed in turn.

3. Press the or button to change the set value. The button is to increase and the button is to decrease.

   *Press the button once to increase by one digit, and press it continuously to keep increasing the set value.

   *Press the button once to decrease by one digit, and press it continuously to keep decreasing the set value.

4. Press the button to finish the setting.
   For models with 2 outputs, [P_2] or [n_2] will be displayed. Set as above.

   ∗: If the button is pressed for 2 seconds or longer, the setting is fixed and measurement mode returns.

The Pressure switch operates within a set pressure range (from P1L to P1H) during window comparator mode. Set P1L (switch lower limit) and P1H (switch upper limit) with the setting procedure above. (When reversed output is selected, [n1L] and [n1H] are displayed.) (to change to window comparator mode, refer to page 26).

Zero clear of Display
The display is reset to zero when the and buttons are pressed simultaneously for 1 second. For the first operation, always perform zero clear with no pressure applied.
Function Setting

Function selection mode
In measurement mode, press the \( \mathbf{F} \) button for 2 seconds or longer to display [F 0].
Select to display the function to be changed, [F   ].
Press the \( \mathbf{F} \) button for 2 seconds or longer in function selection mode to return to measurement mode.

*: Some functions are not available depending on part number. All functions are displayed with [F   ] followed by the function description. If a function is not available, the function is displayed as [- - -].

Default setting
At the time of shipment, the following settings are provided.
If this condition is acceptable, then keep these settings.
To change the settings, enter function selection mode.

[F 0] Unit selection function  See page 25

**[F 1] Setting of OUT1**

Set output method of OUT1.
The output turns on when the pressure exceeds the set value. The default setting of the output set value is the central value between the atmospheric pressure and the upper limit of the rated pressure range.
The display colour depends on the condition of OUT1.
The default setting of the display colour is as follows: green display when the output is ON and red display when the output is OFF.
For the operation of each setting, refer to "List of output modes" on page 28.

**<Operation>**

Press the  or  button in function selection mode to display [F 1].

Press the  button. ➔ Move on to setting output mode.

---

</tr>
</tbody>
</table>

Press the  button to set. ➔ Move on to setting of pressure.

---

**Pressure Setting**

Set the pressure based on the setting procedure on page 22.
"P" becomes "n" when reversed output is selected. ([P_1] → [n_1])
Hysteresis mode: [P_1]
Window comparator mode: [P1L][P1H]

Press the  button to set. ➔ Move on to setting of hysteresis.
Setting of hysteresis
Press the A or B button to select hysteresis.

Displays in turn

Hysteresis Set value

Press the button to set. Move on to setting of display colour.

Setting of display colour
Press the A or B button to select display colour.

Displays in turn

Display color Set value

ON: Green
OFF: Red
ON: Red
OFF: Green
Normally: Red
Normally: Green

Press the button to set. Return to function selection mode.

Setting of [F 1] operation of OUT1 completed

• 1: The selected parameter becomes effective after pressing the button.
• 2: After setting, it is possible to move to measurement mode by pressing the button again.
List of output modes

- Normal output (Default setting)
- Reversed output

Hysteresis mode (Default setting)

Switch output:
- ON: Hysteresis (H_1)
- OFF: P_1

High pressure: Compound pressure, positive pressure
High vacuum: Vacuum pressure

Window comparator mode

Switch output:
- ON: Hysteresis (H_1)
- OFF: P1L, P1H

High pressure: Compound pressure, positive pressure
High vacuum: Vacuum pressure

Hysteresis mode

Switch output:
- ON: Hysteresis (H_1)
- OFF: n_1

High pressure: Compound pressure, positive pressure
High vacuum: Vacuum pressure

Window comparator mode

Switch output:
- ON: Hysteresis (H_1)
- OFF: n1L, n1H

High pressure: Compound pressure, positive pressure
High vacuum: Vacuum pressure

If the set point when the switch output is changed is outside the set pressure range due to switching between normal and reversed output, the hysteresis will automatically be compensated.

*: The above figure shows the operation of OUT1.
For the operation of OUT2, "1" shown in the figure above becomes "2". (Ex) P_1 → P_2
**[F 2] Setting of OUT2**
Set output method of OUT2.
The display colour is linked to the setting of OUT1, and cannot be set for OUT2.

*<Operation>*
Press the or button in function selection mode to display [F 2].
Press the button. Move on to setting output mode.

Set [F 2] based on [F 1] setting of OUT1 (page 26 to 28).

**[F 3] Response time (chattering prevention function)**
Select the response time of the switch output.
Output chattering can be prevented by setting the response time.

*<Operation>*
Press the or button in function selection mode to display [F 3].
Press the button. Move on to setting of response time.

**Setting of response time**
Press the or button to select response time.

Press the button to set. Return to function selection mode.

Setting of [F 3] Response time completed
[F 4] Analogue output / Auto-shift input

Auto-shift function
This function is available when the analogue output / auto-shift input option has been selected.
Auto-shift: A function where the switch output is determined by the change in pressure, relative to a reference set value, when an external signal is input.
Auto-shift zero: A function where the switch output is determined by the change in pressure, relative to a reference set value, and the display reset to zero, when an external signal is input.

Operation
Press the \( \uparrow \) or \( \downarrow \) button in function selection mode to display [F 4].
Press the \( \uparrow \) button. Move on to setting of function.

Setting of function
Press the \( \uparrow \) or \( \downarrow \) button to select the function.

Displays in turn
Function \( \uparrow \) Set value \( \downarrow \)

Analog output \( \uparrow \) Auto-shift input \( \downarrow \)
Press the \( \uparrow \) button to set.
Move on to auto-shift function setting when auto-shift input is selected.

Return to function selection mode when analogue output is selected.

Setting of Auto-shift function
Press the \( \uparrow \) or \( \downarrow \) button to select auto-shift function.

Displays in turn
Auto-shift function \( \uparrow \) Set value \( \downarrow \)

Auto-shift \( \uparrow \) Auto-shift zero \( \downarrow \)
Press the \( \uparrow \) button to set.
Move on to setting of effective output.
Conditions and explanations for auto-shift function

• Maintain a constant pressure for 5 ms or longer from the end of the auto-shift input signal.
• At auto-shift input, [ooo] is displayed for approximate 1 second. The measured pressure value at that time is stored as the corrected value [C_5].
• With the corrected value stored, the set value is compensated.
• The switch output will start within 10 ms of the auto-shift input signal.
• If the measured pressure exceeds the set pressure range during auto-shift input signal, the corrected value will not be stored and [o.r] is displayed for approximately 1 second.
• If the pressure is within the set pressure range and beyond the set value corrected by auto-shift (including hysteresis) when the auto-shift input is applied, the set value is corrected to the upper limit or lower limit (whichever is closer) of the set pressure range automatically. (The correction is performed when the auto-shift input is applied at the pressure beyond the set pressure range. If the auto-shift input is applied again at the pressure within the set pressure range, the correction is released and the product operates according to the set value).
• After completing the pressure setting of OUT2, the corrected value and [C_5] will be displayed in turn. Press the button to return to measurement mode.
• The corrected value [C_5] after auto-shift input will disappear when the power is turned off, and will reset to zero (initial value) when the power is returned.

*: The EEPROM is not used for the memory corrected value.

Using the Auto-shift input, the acceptable set range is as follows:

<table>
<thead>
<tr>
<th>Range</th>
<th>Set pressure range</th>
<th>Accepted set range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Compound</td>
<td>-110.0 to 110.0 kPa</td>
<td>-220 to 220 kPa</td>

</table>
[F 5] Display resolution
This function is used to change the pressure display resolution.
This can be used to prevent the digits from flickering on the display.

<Operation>
Press the or button in function selection mode to display [F 5].
Press the button. Move on to setting of display resolution.

Setting of display resolution
Press the or button to select display resolution.

Displays in turn
Display resolution Set value

1000-split

100-split

Press the button to set. Return to function selection mode.

*: Not selectable depending on the selected display units.
The display resolution selectable unit is MPa (only for SE), kPa (only for ZSE), bar and psi.
(the units "bar" and "psi" are selectable only for models with the unit selection function.
See [F 0] Unit selection function on page 25.)
[F 7] Fine adjustment of display value
This function is used to manually perform fine adjustment of the displayed pressure.
It is adjustable within the range ±5% R.D.

<Operation>
Press the A or B button in function selection mode to display [F 7].

Press the C button. Move on to setting of fine adjustment of display value.

### Setting of fine adjustment of display value
Press the A or B button to change the set pressure value.

Displays in turn

<table>
<thead>
<tr>
<th>Fine adjustment of display value</th>

</tr>
</thead>
<tbody>
<tr>
<td>rSL</td>
<td>off</td>
</tr>
</tbody>
</table>

Press the C button to set. Return to function selection mode.

Setting of [F 7] Fine adjustment of display value completed
**[F 8] Auto-preset function**
When hysteresis mode is selected, the auto-preset function can calculate an optimum pressure value automatically based on the on-going operation.

*Operation*
Press the 第8 or 第9 button in function selection mode to display [F 8].

Press the 第8 button. → Move on to setting of auto-preset.

### Setting of Auto-preset
Press the 第8 or 第9 button to select auto-preset.

```
Auto-preset  Set value
Prs ↔ off
```

Press the 第8 button to set. → Return to function selection mode.

```
Setting of [F 8] Auto-preset completed
```

Press the 第8 button during measurement mode to set the pressure.
Then press the 第8 button again to change the set pressure, while the display is flashing.
**Auto-preset**

When auto-preset is selected in function selection mode, the set pressure can be calculated and stored from a measured pressure value. The set value is automatically optimized by repeated pressure changes to the Pressure switch.

1. Selection of auto-preset OUT1
   - Press the [button in measurement mode to display "AP1". (If OUT1 does not need to be set, press the [ and ] buttons simultaneously for 1 second or longer to move to "AP2").

2. Preparation of OUT1 device
   - Prepare the device for which the pressure of OUT1 is to be set.

3. Setting of auto-preset value of OUT1
   - Press the [ button to display "A1L".
   - After measurement starts, operate the device and change the pressure.
   - When the pressure change is detected, "A1H" will appear automatically, and so continue to operate the device.
   - (If the [ and ] buttons are pressed simultaneously for 1 second or longer while "A1L" is displayed, measurement is stopped and "AP2" will appear).

4. Selection of auto-preset OUT2
   - Press the [ button to set "P_1" and "H_1" ("n_1" and "H_1" for reversed mode) and display "AP2".
   - (If OUT2 does not need to be set, press the [ and ] buttons simultaneously for 1 second or longer to return to measurement mode).

5. Preparation and setting of OUT2 device
   - Prepare the device for which the pressure of OUT2 is to be set, and perform the setting of OUT2 in the same way as for OUT1.
   - After "A2L" is displayed and measurements starts, the pressure change will be detected, and "A2H" will appear automatically.
   - (If the [ and ] buttons are pressed simultaneously for 1 second or longer when "A2L" is displayed, measurement is stopped and the display will return to measurement mode).

6. Completion of setting
   - Press the [ button to set "P_2" and "H_2" ("n_2" and "H_2" for reversed mode) and complete auto-preset mode. After that, the display will return to measurement mode.

The set values for OUT1 are displayed in auto-preset mode as follows:

- Normal output
  - \( P_1 = \frac{A - (A - B)}{4} \)
  - \( H_1 = \frac{A - B}{2} \)
- Reversed output
  - \( n_1 = \frac{B + (A - B)}{4} \)
  - \( \bar{H}_1 = \frac{A - B}{2} \)

\( A = \text{Max. pressure} \)
\( B = \text{Min. pressure} \)

The set values of OUT2 become as follows ":", i.e. "P_2", "n_2" and "H_2".
[F 9] Power saving mode
Power saving mode is selectable.
When the Pressure switch is left for 30 seconds with no key operation, it will enter power saving mode
(the decimal point and indicator LED (only with the switch output ON) will flash during operation).

<Operation>
Press the  or  button in function selection mode to display [F 9].

Press the  button.  Move on to setting of power saving mode.

Setting of power saving mode
[EC0] and the set value are displayed in turn.
Press the  or  button to select power saving mode.

Displays in turn

Power saving mode

Set value

Press the  button to set.  Return to function selection mode.

Setting of [F 9] Power saving mode completed

In power saving mode, any key operation will return the normal display. If there is no key operation for
30 seconds, the display will return to power saving mode (only in measurement mode).

In power saving mode, only the decimal points and indicator
LEDs will flash (the LEDs flash only when the switch is ON).

*: The indicator LEDs will flash when the switch is ON, but it is not synchronized with the output.
[F10] Security code

A security code can be selected, which must be entered to unlock the keys when the keys are locked.

<Operation>
Press the ◄ or ► button in function selection mode to display [F10].

Press the ◄ button. ▼ Move on to setting of security code.

Setting of security code
[Pin] and the set value are displayed in turn.
Press the ◄ or ► button to select security code.

Displays in turn
Security code
Set value

Pin
Off

On

Unused
Press the ◄ button to set. ▼ Return to function selection mode.

Setting of [F10] Security code completed

If the security code is used, it becomes necessary to enter the security code to release the key lock.
The security code can be decided optionally by the operator.
The default setting is "000".

Refer to page 42 for the security code input.
■ Special function setting

■ [F98] Setting of all functions

All functions can be set, one after the other.

<Operation>
Press the \( \text{①} \) or \( \text{④} \) button in function selection mode to display [F98].

Press the \( \text{⑤} \) button. \( \downarrow \) Move on to setting of all functions.

**Setting of all functions**

[ALL] and the set value are displayed in turn.

Press the \( \text{①} \) or \( \text{④} \) button to select all functions.

- **[on] (used)** selected
  - Press the \( \text{⑤} \) button to set.
  - Return to function selection mode.

- **[off] (unused)** selected
  - Press the \( \text{⑤} \) button for 2 seconds or longer.
  - Return to function selection mode.

  After the change to **[off]** (unused), press the \( \text{⑤} \) button to set.

**Setting of each function** *1

Press the \( \text{⑤} \) button for 2 seconds or longer.

**[F98] Setting of all functions completed**

**Measurement mode**

*1: Setting of functions

Every time the \( \text{⑤} \) button is pressed, the function steps in the "Order of Function setting" on page 39.

Set using the \( \text{①} \) or \( \text{④} \) buttons.

Refer to each section for further details of the setting.

</tbody>
</table>

Press the 3 button for 2 seconds or longer.

**Measurement mode**

*: Measurement mode will return from any setting by pressing the 3 button for 2 seconds or longer.

**: Function that will be set by the return to measurement mode.
[F99] Reset to the default setting
If the setting of the pressure switch becomes unknown, the default setting can be restored.

**<Operation>**
Press the or button in function selection mode to display [F98].
Press the button. Move on to reset to the default setting.

**Reset to the default setting**
Set the display [ON] by pressing the or button, then press the and buttons simultaneously for 5 seconds or longer.

- [F99] (unused) selected
  - Press the button to set
  - Return to function selection mode.

The setting is reset to the default setting, and the mode returns to the function selection mode.

Setting of [F99] Reset to the default setting completed
Other Settings

○ Peak/Bottom value display
The maximum (minimum) pressure from when the power was supplied to this moment is detected and updated.
In peak/bottom display mode, this pressure is displayed.
For peak display, when the button is pressed for 1 second or longer, the maximum pressure and "Hi" starts flashing, and is held.
To release holding the display of the maximum pressure, press the button for 1 second or longer again to return to measurement mode.
For bottom display, when the button is pressed for 1 second or longer, the minimum pressure and "Lo" starts flashing and is held.
To release holding the display of the minimum pressure, press the button for 1 second or longer again to return to measurement mode.
If the and buttons are pressed simultaneously for 1 second or longer while the pressure is being held, the maximum (minimum) value is reset.

○ Zero Clear
The displayed value can be adjusted to zero when the measured pressure is within 10% of the span between atmospheric pressure and upper limit of rated pressure range, from the default value of pressure.
(A tolerance range of ±1% digit may apply due to individual product differences).
Press the and buttons simultaneously for 1 second or longer, to clear the display to “0”.
The display will return to measurement mode automatically.
For analogue output, the analogue output will be changed along with the display.

○ Key Lock
The key lock function is used to prevent errors occurring due to unintentional changes of the set values.
If a button operation is performed while the key lock setting is ON, "LoC" is displayed for approximately 1 second.
The set value can be displayed by pressing the button (It cannot be changed).

<Operation - Without security code input- >
1, Press the button for 5 seconds or longer in measurement mode.
The current setting "LoC" or "UnL" is displayed.
(selecting or releasing the key lock is carried out in a similar way).

2, Press the or button to select key lock (or key unlock).

3, Press the button to store the setting.
<Operation - With security code input - >

• Locking
  1. Press the button for 5 seconds or longer in measurement mode. The current setting “UnL” is displayed.

  [Image of a display showing “UnL”]

  2. Press the or button to select keys lock “LoC”.

  [Image of a display showing “LoC”]

  3. Press the button to store the setting.

• Unlocking
  1. Press the button for 5 seconds or longer in measurement mode. The current setting “LoC” is displayed.

  [Image of a display showing “LoC”]

  2. Press the or button to select keys unlock “UnL”.

  [Image of a display showing “UnL”]

  3. When the button is pressed, input of the security code will be requested. For how to enter the security code, refer to “How to input enter the security code” on page 42.

  [Image of a display showing a security code]

  4. If the security code entered is correct, the display will change to “UnL”. Press any of the , , or buttons to release the key lock and return to measurement mode.

  If the security code entered is incorrect, “FAL” will be displayed and the security code must be entered again. If an incorrect security code is entered three times, “LoC” is displayed and the display will return to measurement mode.
•How to change the security code
At the time of shipment, the security code is set to “000”, but this can be changed to any number.

<Operation>
1. After the Key lock setting has been completed, perform the first three steps in the unlocking procedure (page 42).
2. After the security code has been entered and the display changes to “UnL”, press the \[\text{0}\] and \[\text{0}\] buttons simultaneously for 5 seconds or longer.
   “000” is displayed and a new security code can now be entered.
   For how to enter the security code, refer to “How to enter the security code”.
   The new security code will be displayed.
3. After checking the security code is as required, press the \[\text{0}\] button for 1 second or longer.
   The display will return to measurement mode.

At this time, if the \[\text{0}\] or \[\text{0}\] button is pressed, any security code changes are lost, and the change of security code procedure must be repeated.

•How to enter the security code
The first digit will start flashing.
Press the \[\text{0}\] or \[\text{0}\] button to select a value.
Press the \[\text{0}\] button to set and the next digit will start flashing.
(If the \[\text{0}\] button is pressed at the last digit, the first digit will start flashing again).
After the setting is completed, press the \[\text{0}\] button for 1 second or longer.
(If a key operation is not performed for 30 seconds, while entering the security code, the measurement mode will return).
**Maintenance**

How to reset the product after a power cut or forcible de-energizing
The setting of the product will remain as it was before a power cut or de-energizing. The output condition is also basically recovered to that before a power cut or de-energizing, but may change depending on the operating environment. Therefore, check the safety of whole installation before operating the product. If the installation is using accurate control, wait until the product has warmed up (approximately 10 to 15 minutes).

---

**If the security code is forgotten**

The following procedure can be used when the security code has been forgotten.

<Operation>

Press the button for 5 seconds or longer in measurement mode. The current setting "UnL" or "LoC" is displayed.

Press the and buttons simultaneously for 5 seconds or longer. Then, press the and buttons simultaneously for 5 seconds or longer.

* There will be no change to the display.
(at this time, if another operation is performed or no key operation is performed for 30 seconds, the display will return to measurement mode).

Press the and buttons simultaneously for 5 seconds or longer. The display will change to "000" and the security code change mode will return.

Refer to "How to change the security code" (page 43) and select a new security code.

The new security code will be displayed.
Check the security code is as required, and press the button for 1 second or longer.

The display will return to measurement mode.

At this time, if the or button is pressed, any security code changes will be lost, and the change of security code procedure must be repeated.
Troubleshooting

Applicable Pressure switch: ZSE80(F)/ISE80(H)

If the cause of the failure cannot be identified and normal operation can be recovered by replacement with a new Pressure switch, this indicates that the Pressure switch itself is faulty. Pressure switch damage can be caused by the operating environment (network construction, etc.), therefore contact SMC.

The Pressure switch does not operate correctly
